SELECT COMMITTEE ON CONSUMER CREDIT

of the

ONTARIO LEGISLATURE

July 27, 1964

July 27, 1964

THE CHAIRMAN: Mr. George Bukator,
Mr. Fred Edwards, Mr. George Hamilton, Mr. George Kerr,
Mr. Allan Lawrence, Mr. Lloyd Letherby, Mr. D. C.
MacDonald, Mr. Farquar Oliver, Mr. Leonard Reilly,
Mr. R. D. Rowe, Mr. Ross Whicher and Mr. John White;
those are the members of the Committee. Mr. MacDonald
coming in now.

Ladies and gentlemen, this is the first
meeting of the Consumer Credit Committee to be held
since the presentation of the interim report to the
Legislature last session. The Prime Minister and the
Legislature has seen fit to reappoint the Committee
with some additional members to continue the valuable
work which we commenced just a year ago.

I particularly want to welcome the
new members to the Committee who are attending their
first meeting this afternoon. I am sure their
experience and ability will add great strength to the
Committee.

We also have with us this afternoon
Mr. Douglas Irwin, B.A.C.A., our consultant and Mr.
Joseph Sedgwick, Q.C., our Counsel. In addition we
have with us Mr. Harper Stone, who is well known to
all the members of the Committee as he has taken part
in Committee meetings of the Legislature for many
years, and he is representing Mr. Thomas Harcourt, the
Secretary of the Committee, who is presently on
holidays.

Having a quorum, we will now commence

1 with the meeting and the first gentleman we will
2 hear from is Mr. J. A. Tuck, who is representing,
3 with other representatives, the Canadian Life Insurance
4 Officers Association. I would ask Mr. Tuck to
5 introduce the other gentlemen who are accompanying
6 him here today.

7 MR. TUCK: Mr. Chairman and honourable
8 members, Mr. M. K. Kenny, President of Excelsior
9 Life and First Vice-President of the Association
10 will introduce the members of our group to you. I
11 should first like to discuss with you, if I may,
12 the procedure. You have invited the Association
13 to appear and also five individual member companies.
14 Is it your wish that the Association should make
15 its presentation first?

16 THE CHAIRMAN: Yes, we have the
17 Association's brief on our agenda to lead off. If
18 you would care to have Mr. Kenny introduce the other
19 gentlemen now, he can do so and then we will proceed
20 with the brief from the Association.

21 MR. TUCK: And then follow on with
22 the individual companies?

23 THE CHAIRMAN: It is my understanding
24 that London Life is going to follow on after the
25 Association.

26 MR. TUCK: Well, that fits in with
27 our thinking. We have two member companies represented
28 here today from out of town, the London and the Mutual.
29 If it is agreeable with the other companies that they
30 should follow on after the Association --

1 THE CHAIRMAN: That's quite agreeable.

2 MR. TUCK: -- in that order. Well

3 then, Mr. Kenny with introduce our people to you.

4 Thank you.

5 THE CHAIRMAN: Thank you, Mr. Tuck.

6 MR. KENNY: Mr. Chairman and gentlemen

7 of the Committee. It is a pleasure for representatives

8 of our member companies which you have selected to

9 invite to appear before you and to give you any

10 information that we can on this subject of mortgage

11 loans and more particularly today, policy loans.

12 I would like to introduce to you, if

13 I may, the members of this rather large and, I can

14 assure you, technically competent group, who will

15 be available for any answers you may require.

16 Mr. Tuck, of course, most of you

17 know -- you, sir, and Mr. Sedgwick and others.

18 Mr. Frank Finnick, the Secretary of the Canadian

19 Life Insurance Officers Association; Mr. T. D. Kent,

20 our legal assistant of the Association; and then

21 from the various companies -- if I may introduce them

22 by company -- from the Canada Life Mr. F. W. T.

23 Irwin, Executive Assistant, who I think perhaps has

24 been introduced to you before at previous meetings;

25 Mr. J. H. Wainwright, the Associate Secretary and

26 Claims Officer; Mr. D. E. Shaver, Superintendent of

27 Mortgage Investments; then from the Empire Life

28 Mr. J. M. McGillis, the Manager of the Investment

29 Department; from our own company, the Excelsior Life,

30 Mr. A. D. Carnegie, our President, Mr. D. R. Culver, our

1 Vice-President and Actuary, who is the Chairman of
2 the Special Committee of the Life Officer's
3 Association in preparing the brief and making the
4 proposals on policy loans. Mr. J. McCready, Mortgage
5 Manager for Excelsior Life.

6 Then from the London Life Mr. J.C.A.
7 McDonald, Executive Assistant of the Secretary's
8 Office. Mr. J. A. Milliman, Mortgage Executor.

9 From the Mutual Life of Canada in
10 Waterloo Mr. D. L. Fox, Assistant Secretary and Mr.
11 D. A. Rogers, Associate Secretary and Legal Officer.

12 That, sir, constitutes our delegates
13 who appear before you today and I think I'll ask
14 Mr. Tuck to produce the -- read the brief.

15 THE CHAIRMAN: Thank you very much,
16 Mr. Kenny.

17 MR. TUCK: Is it all right if I sit
18 down, Mr. Chairman?

19 THE CHAIRMAN: You can stand or sit
20 down, whichever you prefer.

21 MR. TUCK: Do all members of the
22 Committee have copies of the brief? It's not a long
23 one. It is your wish I should read it?

24 THE CHAIRMAN: Yes, if you would do
25 that.

26 MR. TUCK: I'm in your hands as to
27 whether you wish to direct questions to us as we go
28 along or at the end.

29 THE CHAIRMAN: Following your brief
30 I think would be the best time. Then we will ask Mr.

1 Sedgwick or Mr. Irwin if they have any questions and
2 then some of the members of the Committee may have
3 individual questions they wish to ask as well.

4 MR. TUCK: The Association is a
5 voluntary organization of 100 companies in the life
6 insurance business in Canada. As of November of
7 last year, 89 of these companies were licensed to
8 transact business in Ontario. Forty-four have their
9 head offices or chief offices for Canada in Ontario.

10 A great deal of statistical information
11 on the operation of member companies in Canada and
12 Ontario is given in Canadian Life Insurance Facts 1963.
13 (This little booklet you have -- and rather than
14 duplicate a lot of these facts in our submission, we
15 have attached it to the submission). Of course if
16 there is any other information you require we shall
17 be pleased to supply it.

18 First of all on mortgage loans. The
19 Association does not serve its member companies in the
20 mortgage loan field. Twenty-five of our members are
21 members of the Dominion Mortgage and Investment
22 Association which functions in this area. Representatives
23 of that Association appeared before you a year ago
24 and we have nothing to add to the information they
25 supplied to you. All five member companies individually
26 invited to appear before you are members of that
27 Association and their mortgage loan practices are in
28 line with those set out in the brief submitted by the
29 Dominion Mortgage Association. However, one of the
30 companies would like to present further information

1 than that given in the Dominion Mortgage brief on
2 mortgage loan practices and will have something further
3 to say on the subject following our presentation as
4 well as enlarging on our brief on policy loans.

5 Life insurance companies are empowered
6 by the insurance statutes to invest in policy loans.

7 At the end of 1962 policy loans in Canada of federally
8 registered companies amounted to \$372 million. By the
9 end of 1963 this figure had risen to \$385 million,
10 which was 5.2% of total reserves. The policy loans
11 of provincial companies in Canada were approximately
12 \$16 million at the end of 1963.

13 In level premium life insurance the
14 premium is set for the term of the contract even though
15 the cost of the protection increases year by year.
16 Thus a reserve is accumulated by the insurer in the
17 early years of the policy from that portion of the
18 premiums not required to provide for the cost of
19 protection for those years. This reserve is invested
20 by the insurer. It provides a fund which, with interest
21 earnings, reduces the amount at risk and enables the
22 insurer to meet the increased cost of protection in
23 later years. The reserve on a policy provides the
24 basis on which the cash value may be computed. All
25 policies having a cash value provide that the owner may
26 borrow from the insurer on the security of the cash
27 value. The contractual right to obtain a loan is a
28 continuing right which is available at any time that the
29 policy has a cash value. Generally, the amount of the
30 loan may not exceed a figure which ranges between 90% and

1 95% of the cash value. The maximum rate of interest
2 chargeable is also set out in the policy.

3 A substantial portion of the total
4 policy loans outstanding are automatic premium loans.
5 The automatic premium loan provision is a valuable
6 safeguard for the policyholder under which a premium in
7 default is advanced as a loan on the security of the
8 cash value of the policy. This ensures that the
9 protection afforded by the policy will remain in force
10 even though a premium payment may be omitted because of
11 oversight or temporary adversity. The provision will
12 continue to operate so long as any cash value remains
13 in the policy.

14 The right to obtain a policy loan is a
15 contractual right. It is not necessary for the
16 applicant to establish a credit rating nor does the rate
17 of interest he is charged vary according to his circum-
18 stances or the size of the loan.

19 There is no obligation on the borrower
20 to repay the loan either in whole or in part. Nor is
21 there an obligation to pay outstanding interest on the
22 loan. The loan may be repaid at any time and without
23 any penalty. On the other hand, insurers encourage the
24 repayment of policy loans by accepting partial repayments,
25 even in small amounts. Any outstanding loan at the time
26 a policy matures is deducted from the proceeds otherwise
27 available.

28 We wish to stress that there are no extra
29 costs, service fees or hidden charges in connection with
30 policy loans. The applicant receives exactly the amount

1 of the loan and the only cost is the interest. This
2 is charged on a day-to-day basis and it is, therefore,
3 a simple matter at any time to determine the amount
4 required to discharge the loan.

5 Currently, interest on policy loans is
6 being charged by most companies at the rate of 6%
7 per annum; some are charging 5½% and some 5%. Six
8 percent is the maximum rate chargeable for these
9 loans by virtue of an undertaking given by the members
10 of the Association to the Prime Minister of Canada
11 in 1935 and communicated by him to the House of Commons.
12 The undertaking was that interest on new and existing
13 loans chargeable after January 1, 1936, would not
14 exceed 6% in arrears. The Department of Insurance at
15 Ottawa considers that this undertaking is still
16 binding on those companies that give it and on all
17 companies that subsequently became registered with
18 the Department.

19 The size of the average policy loan is
20 small and consequently the insurer's administrative
21 costs are higher than for most other forms of invest-
22 ment. Necessary administrative details consist of
23 computation of loan values, granting the loan,
24 recording the transaction, calculating interest due on
25 the loan, preparing interest notices, handling interest
26 payments and repayments of principal, and keeping
27 accounts required for annual statement purposes. It is
28 also necessary in the case of automatic premium loans to
29 determine the values remaining in the policy, to
30 calculate lapse dates and to prepare lapse notices.

1 Because of these costs the net return to the insurer is
2 less than the rate charged for the loan. At the
3 present time policy loans are netting a lower rate of
4 return than the average of the total investment
5 portfolio of most companies. They are, therefore,
6 regarded more as a service to policyholders than as an
7 investment.

8 Thank you, Mr. Chairman.

9 THE CHAIRMAN: Mr. Sedgwick, do you
10 have any questions?

11 MR. SEDGWICK: I have no questions.
12 I just want to clarify two things. Firstly, your
13 Association as such has nothing at all to do with the
14 mortgage loan business of your individual companies,
15 is that correct?

16 MR. TUCK: That is right, Mr. Sedgwick.

17 MR. SEDGWICK: And then as to your
18 statement as to policy loans, do I take it that you
19 charge nothing but interest. There is no fee of any
20 kind charged to the borrower?

21 MR. TUCK: That is correct, Mr.
22 Sedgwick.

23 MR. SEDGWICK: Merely interest. The
24 interest accumulates and in the event of maturity
25 of the policy the loan and interest outstanding is
26 deducted from the amount payable. Is that right?

27 MR. TUCK: That is correct.

28 MR. SEDGWICK: That's all I wanted to
29 make clear. Thanks very much.

30 THE CHAIRMAN: Mr. Irwin, do you have

1 any questions?

2 MR. IRWIN: None pertaining to the
3 Association.

4 THE CHAIRMAN: All right, then we will
5 start and just go around the table. Mr. Whicher do
6 you have any questions?

7 MR. WHICHER: No, thank you.

8 THE CHAIRMAN: Mr. Bukator? Mr.
9 Lawrence? Mr. MacDonald? Mr. Oliver? Mr. White?

10 MR. WHITE: I would like to ask for
11 clarification of the third last sentence on page 4 --
12 "Because of these costs the net return to the insurer
13 is less than the rate charged for the loan".

14 MR. TUCK: The contractual arrangement,
15 let us say of 6% -- the administration costs might be
16 of the order of .7 or .8%. The net return is therefore
17 5.2 or 5.3. Under today's conditions this is less
18 than the companies are earning on their total portfolios.
19 The net return from the interest on policy loans is
20 less than the net return from all their investments --
21 their total investments.

22 MR. WHITE: Thank you.

23 THE CHAIRMAN: Mr. Reilly?

24 MR. REILLY: I'm happy.

25 THE CHAIRMAN: Mr. Roe? Mr. Letherby?
26 Mr. Kerr, do you have any questions you wish to ask the
27 speaker?

28 Is there anything you wish to add to
29 your brief by way of a statement to the Committee?

30 MR. TUCK: No, I don't think so.

1 THE CHAIRMAN: It would appear that
2 only a small percentage of the policy holders do make
3 a loan against their policies. Is that correct?

4 MR. TUCK: Yes, a small percentage.

5 THE CHAIRMAN: Do you have any idea
6 why these loans are made?

7 MR. TUCK: Well, as we stated here, a
8 very large percentage of them are automatic premium
9 loans which are made under the policy to pay premiums.
10 The others are made for an infinite variety of reasons
11 that people wish to borrow money.

12 THE CHAIRMAN: And as a company you
13 are not particularly concerned with the reasons they
14 are borrowing money?

15 MR. TUCK: No, we are not, sir. It is
16 the contractual right of the policy holder. We are
17 anxious to see them repay them to keep the policy --
18 to restore the policy to good standing.

19 THE CHAIRMAN: Could you give us an
20 idea of how many policies that are loaned upon are
21 put back into -- the loan repaid and the policy
22 reinstated?

23 MR. TUCK: I don't think so but I
24 would like to ask Mr. Dimicrat and also -- whether there
25 are any figures on the number of policy loans.

26 MR. DIMICRAT: Mr. Chairman, I know of
27 no figures available on the number of policy holders.
28 I think as far as the amounts repaid, there are some
29 figures in the narrative of this fact book of which you
30 all possess a copy, on page 22. Of the policy loans

1 repaid since 1950, 10% of the amount repaid was on
2 death or maturity of the policy; 39% by surrender
3 of the policy and 51% during the lifetime of the
4 policy.

5 MR. TUCK: Mr. Chairman, I might
6 volunteer one small bit of information. We have at
7 the present time 139,000 individual policies in
8 force. On those policies -- 18% of those policies
9 have loans against them. I think ours, perhaps, is
10 an average experience in that field.

11 MR. MACDONALD: How much of that 18%,
12 Mr. Chairman, would be for mortgages?

13 MR. TUCK: There would be no (rest
14 inaudible)

15 MR. SEDGWICK: Mr. Kenny, I am referring
16 now to what Mr. Price said, as the right to a loan is
17 a contractual right, I take it you do not enquire why
18 the man wants the money, is that right?

19 MR. KENNY: There are no questions
20 asked, no.

21 MR. SEDGWICK: I have a reserve of
22 a thousand and I want to borrow seven hundred or
23 eight hundred, whatever it may be?

24 MR. KENNY: The usual procedure is
25 he either asks the company, what is the current value
26 in money, or how much can I borrow, then he will either
27 borrow the maximum or perhaps a lesser amount.

28 MR. WHICHER: Giving no reason what-
29 soever?

30 MR. KENNY: No reason whatsoever.

1 MR. SEDGWICK: That was my understanding.

2 MR. KENNY: Mr. Chairman, I should
3 have said that I was speaking with a lack of information
4 for all companies on an Association basis, and so is
5 Mr. Dimicrat. I think you will find some of the
6 other companies here individually have pleasures
7 when you come to them to discuss their presentation.

8 MR. MACDONALD: Does it appear from
9 your experience in this situation that more policy
10 holders are borrowing against their policies today
11 as opposed to, say, five years ago?

12 MR. TUCK: No. I think perhaps less.
13 The table on page 22 of the fact book shows decreasing
14 ratio of policy loans to reserves in almost every year
15 since 1935. Now these aren't numbers, these are
16 amounts of loan.

17 MR. SEDGWICK: It's the percentage
18 of the amount of available reserve, is that right?

19 MR. TUCK: Yes. That's been going
20 down quite consistently. 5.4 in '62 seems to be the
21 low figure.

22 MR. MACDONALD: Mr. Chairman, may I
23 ask what is your suggestion as the reason for this?
24 Are they finding money elsewhere -- other sources --
25 or what?

26 MR. TUCK: Yes and perhaps relatively
27 good times is --

28 MR. MACDONALD: Well, Mr. Chairman,
29 I think the amount of monies on the board -- the
30 figures have gone off at times -- but it appears to be

1 going up and up.

2 MR. TUCK: That's true.

3 MR. MACDONALD: That seems to go
4 up with good times, therefore presumably yours would
5 go up with good times to. People are willing to
6 expand a bit.

7 MR. TUCK: I don't think one is
8 parallel to the other, Mr. MacDonald. I think most
9 people -- apparently most people are reluctant to
10 borrow on their life insurance if they can get by
11 without it. In many cases getting by without it
12 includes going elsewhere for financing.

13 MR. SEDGWICK: They regard it as sort
14 of a sacred trust and they don't want to impair its
15 value?

16 MR. TUCK: Yes, some thing of that
17 nature.

18 MR. WHICHER: We will know in a few
19 years whether that is so. As you are aware from
20 action taken by this legislature a couple of years ago
21 on new insurance the preferred beneficiary trust
22 doesn't apply, so a man can borrow without telling his
23 wife.

24 MR. SEDGWICK: He cannot, though, when
25 there is a preferred beneficiary, isn't that right?

26 MR. TUCK: On new ones from July 1, 1962
27 he can. Prior to that he could not.

28 MR. SEDGWICK: If what Mr. MacDonald
29 says is true he has to consult no one but the wife or
30 preferred beneficiary.

1 MR. TUCK: Yes. It will be some
2 years before we know whether that has any effect on
3 the ratio of loans.

4 THE CHAIRMAN: Mr. Irwin?

5 MR. IRWIN: I was interested in the
6 arrangement whereby there appears to be a gentlemen's
7 agreement between the government of Canada and the
8 registered life insurance companies in regard to the
9 rate charged on policy loans. Is that the only
10 restriction?

11 MR. TUCK: Yes. This is a very unique
12 thing, Mr. Irwin. I can't recall a parallel to this
13 situation. Apparently around this time there was great
14 agitation in Parliament about various interest rates.
15 I think the bank interest rate was under discussion
16 and some discussion about the policy of loan interest
17 rate too. I think at that time some companies
18 probably were charging more than 6, but most of them
19 would be 6 or less. It was before my time with the
20 Association but my recollection is that the
21 Superintendent of Insurance took the initiative. He
22 said that he didn't think there was any need of
23 legislation on this point, that it might freeze it in
24 a slot that later conditions wouldn't justify and he
25 undertook to approach the companies and see if they
26 wouldn't give this undertaking to the Prime Minister,
27 and it was done.

28 MR. IRWIN: Is there any likelihood
29 of a great change in the agreement?

30 MR. TUCK: I would think -- I can see

1 circumstances where it might be, yes. If interest
2 rates climbed higher than they are now and if other
3 financial institutions were charging more, I could
4 see the companies going to the government and saying
5 well, that undertaking was all very well back in 1935
6 and it was even all right up to 1960X, but not now.
7 We are at the point now where the net return on
8 policy loans is way lower than our general returns
9 and we would like to be relieved of the undertaking.
10 I don't know what the government would say to them
11 but I can see that development occurring.

12 MR. IRWIN: I wonder if you -- some
13 of the others have said here -- there doesn't appear
14 to have been a great increase in the borrowing as far
15 as policy loans are concerned on the part of policy
16 holders and yet the rate by general agreement is
17 fixed, there is no other charges, one would rather
18 expect that in view of the higher rates that they
19 have to pay elsewhere for borrowing that there might
20 just be a run on (rest inaudible). Supposing that
21 were to happen. Would the life companies do this?
22 I mean, for example, supposing the rate of borrowing
23 in ratio to the total cash value were very high,
24 would this not be the probability of a great many
25 cancellations?

26 MR. TUCK: Yes. I think the
27 companies would view a substantial increase with
28 considerable alarm, and take steps to stop it. They
29 could, by raising the rates, for example. Yes, because
30 they couldn't alter the contract, they couldn't raise

1 the rate for old policies, you realize that. They
2 couldn't raise it for the old policies.

3 MR. MACDONALD: In that connection,
4 Mr. Chairman, may I ask how much below your general
5 return?

6 MR. TUCK: We have no industry
7 average on this, Mr. MacDonald. The companies that
8 are here individually could tell you, but I think
9 that the spread might be as much as a half of one
10 percent. Is that anywhere near it, do you think?

11 MR. MACDONALD: In other words your
12 net on policy loans might be 5.2 but your net on your
13 other assets might be 5.7?

14 MR. SEDGWICK: In any event, Mr.
15 Tuck, it's considerably below the current mortgage
16 rates, isn't it?

17 MR. TUCK: Yes, it is, Mr. Sedgwick.

18 MR. WHICHER: There is really a big
19 difference because they are actually borrowing their
20 own money.

21 MR. MACDONALD: So that is built up
22 from premiums you pay yourself -- it's your own money?

23 MR. WHICHER: You could get that
24 money tomorrow.

25 MR. MACDONALD: You could get that
26 money tomorrow by surrendering the policy?

27 MR. WHICHER: So if the rate was 8%,
28 for example, the chances are there would be cancel-
29 lations --

30 MR. MACDONALD: There might be a lot

1 of cancellations.

2 MR. WHICHER: This raises an
3 interesting question in respect to rate, at any rate,
4 following along with what the last Committee member
5 said. One of the concepts that has arisen in our
6 discussions at various times is the concept of
7 pure interest. Would you say that this is pretty
8 close to pure interest?

9 MR. TUCK: Well, I might have at
10 one time, but I pread the proceedings of the House of
11 Commons -- one of the House of Commons Committees
12 a few years ago on -- which contained arguments about
13 what is true interest, the way you calculate it, and
14 I since decline to classify myself as an expert on
15 that one. I think that this is interest in arrears
16 calculated on a day-by-day basis. It would be like
17 simple interest in arrears.

18 MR. WHICHER: Well, I had in mind
19 the fact that you have absolute security.

20 MR. TUCK: Oh yes, we have absolute
21 security.

22 MR. WHICHER: Whatever you charge is as
23 close to just pure interest as you can possibly
24 get, probably. For instance, finance companies claim
25 that what they charge includes an administrative fee
26 and other things, the chance of risk, and so on.

27 MR. TUCK: Ours doesn't include a
28 risk factor but it does include, of course, the
29 administration fee. It's pretty close to a government
30 bond, really, as far as risk is concerned.

1 MR. SEDGWICK: Your net yield is
2 about the yield of a good government bond?

3 MR. TUCK: Yes, pretty close.

4 MR. SEDGWICK: Less you administrative
5 costs.

6 MR. TUCK: Pretty close, but not as
7 much as we are getting on mortgages or corporate bonds.

8 MR. MACDONALD: When was the Association
9 formed?

10 MR. TUCK: 1894.

11 THE CHAIRMAN: And you do represent
12 the majority of life insurance companies in Canada?

13 MR. TUCK: Virtually all of them,
14 Mr. Chairman.

15 THE CHAIRMAN: I see. Thank you.
16 I presume some companies, some of the smaller companies,
17 do not belong to your Association? Is that true?

18 MR. TUCK: Yes, there are -- Oh, I
19 think there might be four or five small Canadian
20 companies that do not belong and there are maybe
21 seven or eight non-resident companies with very
22 small business income that don't belong. Am I anywhere
23 close on those figures?

24 MR. KENNY: Another way of putting it,
25 Mr. Chairman, might be to say that 99% of premium
26 income in Canada is represented by the Association.

27 THE CHAIRMAN: How do you base your
28 fees to various member companies?

29 MR. TUCK: The fees are a flat amount
30 for a member company of \$100.00 and the balance of our

1 expenses are assessed year by year on the basis of
2 premium income.

3 THE CHAIRMAN: And what service do
4 you provide to the public as an Association?

5 MR. TUCK: We act as an information
6 centre to the public. We are constantly requested
7 for information of the type that's in the fact book --
8 in fact that's why we started publishing this -- to
9 save ourselves work in answering questions. Also as
10 a point of contact for governments with the companies.
11 The individual policy -- we have no relation at all
12 with individual policy holders as far as their
13 contracts with companies.

14 THE CHAIRMAN: Do you have a booklet
15 on policy loans, for example?

16 MR. TUCK: No, we do not.

17 THE CHAIRMAN: I presume then you
18 don't get very many enquiries about that matter?
19 People don't write to you in the Association asking
20 for information about policy loans?

21 MR. TUCK: No, I don't ever recall --

22 MR. IRWIN: Do you exercise any
23 discipline?

24 MR. TUCK: We have no legislative
25 authority over our companies, no. It's a voluntary
26 Association.

27 MR. KENNY: Our Executive Committee,
28 on which each company is represented, does make
29 recommendations to the companies, but whether companies
30 follow them or not, it's their own choosing.

1 THE CHAIRMAN: You are a disciplinary
2 body?

3 MR. KENNY: No, we are not.

4 THE CHAIRMAN: John, any further
5 questions?

6 MR. REILLY: I was wondering, Mr.
7 Chairman, if there were any American companies that
8 are represented in your Association?

9 MR. TUCK: Oh yes, Mr. Reilly, about
10 thirty. These go all the way from American companies
11 with very substantial business in Canada to some
12 with very normal amounts of business in Canada.

13 MR. REILLY: American companies have
14 policy loan --

15 MR. TUCK: Oh yes, they all have
16 policy loan provisions, contracts.

17 MR. REILLY: Are there any -- in your
18 policies -- are there any so-called statutory
19 conditions?

20 MR. TUCK: No, sir. Life insurance
21 contracts are regulated by the insurance Acts.
22 Insurance Acts do not prescribe statutory conditions
23 as they do for fire, automobile, and other loss. They
24 do contain rules though that have similar effect. For
25 instance they contain provisions for grace periods.
26 Now these provisions in the law of Ontario will override
27 any contractual provisions on grace periods. At least
28 they will require that grace go as far as the statutes
29 say. But there is no requirement in the Ontario
30 Insurance Act that the grace provision of a policy must

1 be written in such and such a way.

2 THE CHAIRMAN: Any other questions?

3 MR. REILLY: I was wondering, Mr.

4 Chairman, if Mr. Tuck would tell us whether the
5 different associations and different insurance
6 companies within the organization attempt to have a
7 uniform rate for coverage purposes?

8 MR. TUCK: No, sir.

9 THE CHAIRMAN: Any more questions,
10 gentlemen?

11 I would like to thank Mr. Tuck on behalf
12 of the Committee for the work your Association has put
13 into the brief which you have so ably presented to
14 us today. We have been negotiating with you for some
15 time to appear but we have never been able to just
16 arrange a time that was suitable until now, and we
17 have had to defer meetings and we apologize for
18 any delay which we may have caused you or the
19 Association. Before you go we might just ask you if
20 you have any information you might like to give the
21 Committee, which you think might be useful to us in
22 this whole subject of consumer credit.

23 MR. TUCK: No, I don't think we have.
24 It's a vexing problem, we are aware from newspaper
25 reports of your proceedings and some of the proceedings
26 that we have looked at ourselves. It's an extremely
27 difficult matter. I don't think we would wish to
28 attempt to offer any solutions. We wish you well
29 on your undertaking.

30 MR. REILLY: Before Mr. Tuck leaves,

1 Mr. Chairman, I understand from this brief that as
2 far as the interest rate on policy loans is concerned,
3 it is as low as 5, $5\frac{1}{2}$, but never exceeds 6. Is this
4 right?

5 MR. TUCK: That's right.

6 MR. REILLY: Fine.

7 THE CHAIRMAN: It would be an
8 awfully nice thing to tell the public about, you know.
9 There's a good source of revenue there and people
10 don't know it.

11 MR. TUCK: Thank you very much, Mr.
12 Chairman.

13 MR. IRWIN: Could I take advantage
14 of this to see if any other representatives of our
15 group would like to add anything?

16 In view of what you said, Mr. Tuck,
17 taking it in total, life companies are not in a
18 position such as a bank or finance company where
19 they could and will expand the amount of credit
20 available for loaning purposes. You are pretty much --
21 in fact entirely -- restricted to the cash flow
22 from premium income as to what you can then do in
23 the way of loaning out?

24 MR. TUCK: We certainly couldn't
25 loan beyond our assets.

26 MR. REILLY: Neither could a bank.

27 MR. IRWIN: Well, all right, maybe.
28 But, in other words, you couldn't at will influence
29 the volume of money available for lending purposes.
30 For example, take a finance company. The finance

1 company can borrow from a bank and then add a million
2 on one side and a million on the other side and so on
3 and so on and so on. But you can't do that?

4 MR. TUCK: Well, we have no power
5 to borrow money from other institutions. We are
6 on the other side of it.

7 THE CHAIRMAN: Do you have anyone
8 with you that would care to comment on the life
9 insurance investment in government bonds, for
10 example?

11 MR. TUCK: There is information in
12 here about our government bond investments. Is this
13 what you mean?

14 THE CHAIRMAN: Yes, I am wondering
15 what your companies might have invested, say, in
16 our own bonds?

17 MR. TUCK: Well, government bonds --
18 page 23 shows our total assets year by year and
19 in bonds and debentures, 4 billion 345 at the end
20 of '62 and then down at the bottom there is a
21 breakdown which shows that in '62, of that 4 billion,
22 917 were in Provincial bonds.

23 MR. KENNY: We do have the figure
24 for the end of '62 for Ontario alone. I haven't it
25 with me but it is available, if you want it.

26 THE CHAIRMAN: We would be pleased if
27 you would send it to the Secretary of the Committee.

28 MR. KENNY: All right. I think these
29 fellows will repeat a lot more.

30 THE CHAIRMAN: Well, if that's all,

1 thank you very much.

2 We will now ask Mr. J. C. A. Macdonald
3 of the London Life Insurance Company to please come
4 forward.

5 We will just wait until we get
6 these distributed to the members of the Committee.
7 Do all the members of the Committee have a copy of
8 Mr. Macdonald's brief?

9 Would you proceed then, Mr. Macdonald?

10 MR. MACDONALD: As you all note, from
11 page 1, Mr. Millman, Mortgage Executive of the
12 London Life, and myself are presenting a joint brief
13 on policy loans and mortgages.

14 The London Life Insurance Company
15 was founded in London, Canada in 1974. The Company
16 operates only in Canada and maintains over 100 service
17 centres across the country. There are over 1,800 men in
18 the sales force, 650 staff in branch offices and
19 1,700 employees in the head office. The Company has
20 over 7 billions of life insurance in force and now
21 serves more than $1\frac{1}{2}$ million Canadians. As at
22 December 31, 1963 our invested assets in our Life
23 Branch totalled \$997,800,000.

24 At the invitation of your Committee,
25 we are glad to furnish information in respect to both
26 our policy loan and mortgage lending costs and
27 practices.

28 Policy loans are available to all
29 policy owners on demand up to the extent of the cash
30 value of the policy discounted to the date of loan.

1 Such loans are repayable at any time subject only to
2 a minimum cash repayment of \$10. The policy loan
3 provision is a valuable privilege in times of
4 individual emergency, especially the automatic premium
5 loan provision which assures that the policy will
6 remain in force as described in the Canadian Life
7 Insurance Officers Association brief. Fifty-three
8 percent of new loans advanced in 1963 were premium
9 loans while at December 31, 1963 only 19% of loans
10 outstanding were premium loans, the other 81% being
11 cash loans.

12 Simple interest is charged on
13 outstanding loan balances and is capitalized only on
14 the policy anniversaries. There are no additional
15 charges to borrowers, either when loans are made or
16 upon repayment of them. Borrowers are not required to
17 set up repayment programs although they are encouraged
18 to do so in order that the full face value of their
19 policies may be restored and terminations frequently
20 associated with maximum loans may be avoided. (Appendix
21 I illustrates how interest is calculated and how a
22 repayment program works on a policy loan.)

23 While there is no investment risk
24 connected with policy loans, the option of the policy
25 owner to borrow or repay at any time can have an
26 adverse effect on the Company, as borrowings are often
27 heavier when other forms of investment are most
28 attractive, and repayments increase when general rates
29 are low. During the depression of the 1930's policy
30 loans increased very rapidly and in the case of our own

1 Company were in excess of 14% of invested assets. Over
2 the past fifteen years the total of such loans
3 relative to assets has remained remarkably stable at
4 between 5% and 6%. (See Appendix II for percentage of
5 policy loans to total invested assets during the last
6 thirty-five years.)

7 It is a fallacy, of course, to claim
8 that a policy owner is borrowing "his own money" and
9 should not be required to pay interest on it. Such
10 money could otherwise be invested elsewhere if not
11 invested in policy loans, and only becomes "his own
12 money" when the policy is surrendered for its net
13 cash value.

14 Prior to 1935, most companies stipulated
15 a maximum policy loan rate of 7% in policy contracts.
16 In our own case, interest rates varied from 6% to 7%
17 depending on the size of the loan. In 1935 when
18 general interest rates had declined to fairly low
19 levels, federally licensed companies agreed to limit
20 the rate to 6% and policy contracts since have
21 provided for this maximum. During World War II, when
22 government bond rates declined to still lower levels,
23 London Life voluntarily reduced the rate actually
24 charged on both new and existing loans to 5% in 1944.
25 Subsequently, the loan rate was raised to 5½% in 1953
26 and to 6% in 1957 as other interest rates rose to more
27 normal levels.

28 As at December 31, 1963 our policy
29 loans outstanding totalled \$50,965,000. The average
30 policy loan represents a relatively modest amount.

1 Approximately 69,000 loans were on Regular Ordinary
2 policies with average loan size of \$441, and on an
3 estimated 127,000 loans on "debit" policies (where
4 premiums are normally collected at the home) the
5 average loan size is \$162. The overall average loan
6 is \$261. Less than 15% of all Regular Ordinary and
7 "debit" policies have a loan on them.

8 Overall policy loan costs in the London
9 Life were of the order of .80% of mean policy loan
10 assets in 1963. (Sources of expense are set out in
11 Appendix III.) With a gross rate of 5.99% and
12 expenses of .80%, the effective net rate in 1963 was
13 5.19% which compares with a net rate of 5.54% earned
14 on the total invested assets of the Company in 1963,
15 and a net rate of well over 6% on new investments in
16 that year.

17 If the ceiling of 6% on bank lending
18 rates should be removed as recommended by the Royal
19 Commission on Banking and Finance, it would seem
20 logical to raise the maximum rate on policy loans to,
21 say, 7% although this higher rate would not necessarily
22 be charged in the future and, of course, the 6%
23 ceiling would continue to apply in respect to all
24 policies issued from 1936 to the present. Many
25 policy owners actually borrow from other sources
26 (largely banks) by a temporary assignment of their
27 policies, and if the banks should be permitted to
28 and actually did institute a lending rate in excess
29 of 6%, it is conceivable that direct borrowing
30 from insurance companies would increase substantially.

1 I would be glad to try and answer
2 any questions.

3 THE CHAIRMAN: Carry on.

4 MR. MACDONALD: All right. Perhaps
5 Mr. Millman would care to read the mortgage section.

6 THE CHAIRMAN: Who is going to carry
7 on?

8 MR. MACDONALD: Mr. Millman, our
9 Mortgage Executive.

10 THE CHAIRMAN: Do you wish to ask
11 a question? Carry on.

12 MR. REILLY: Yes. Pertaining to
13 the last sentence, if you would explain -- that if
14 the bank rates were to increase in excess of 6%, it
15 is conceivable that direct borrowing from insurance
16 companies would increase. If you were going to
17 increase your rates why would it be your loans would
18 increase?

19 MR. MACDONALD: The implication here
20 is if we didn't increase our rates and also all
21 policies dated from '36 to '64 now would remain the
22 same so even if we did increase our rates there would
23 be quite a period before the new rate would take --

24 MR. SEDGWICK: Not only existing
25 loans but existing policies, isn't that right?

26 MR. MACDONALD: That's right, yes,
27 existing policies.

28 MR. SEDGWICK: So it would be some
29 years before you could effectively raise your rate
30 above 6%?

1 MR. MACDONALD: That is correct, sir.
2 It would be two years before there is even a policy
3 loan available.

4 MR. LAWRENCE: Your not surely
5 putting yourselves on the same level or bracket
6 as the banks as far as being able to charge the same
7 amount of interest on a loan because -- is there a
8 comparison, I mean is this a teaser you are tossing
9 out to get a reaction? Because surely when there
10 is no risk involved, as far as you people are concerned,
11 you should not be allowed to charge the same as the
12 banks. It has nothing to do with this legislature,
13 of course, it's another jurisdiction, but --

14 MR. MACDONALD: I think probably it's
15 the feeling that banks are charging presently a 6%
16 rate, maybe it's a coincidence that the two rates
17 are one and the same, and from our experience on the
18 number of assigned policies, people tend to borrow
19 from banks rather than from insurance companies.

20 MR. LAWRENCE: But here you are also
21 saying that banks are able to increase their interest
22 rates then why shouldn't you be allowed to. Isn't that
23 the innuendo or impression you are leaving?

24 MR. WHITE: May I comment on this?
25 As the brief says a lot of policies are assigned to
26 banks and money borrowed against the cash surrender
27 value, which I guess is the same as the loan value,
28 so if the bank rate were permitted to go over the six
29 while the life insurance were retriected to the 6%
30 maximum, there would be a lot of people taking their

1 assigned policies from the bank and placing them with
2 the insurance company and I frankly go along with it.

3 MR. LAWRENCE: This is collateral
4 security though. Here, insurance is concerned.

5 MR. WHITE: Sure, it's collateral.

6 MR. LAWRENCE: It's collateral to your
7 loan from the bank. In other words, it would be
8 collateral for your loan from the bank that you
9 would be assigning then.

10 MR. SEDGWICK: The bank would have
11 the same perfect security as the insurance company.

12 MR. MACDONALD: Well, not necessarily.
13 Sometimes they have a hard time collecting on some
14 of the insurance policies.

15 MR. LAWRENCE: But in any event, here --
16 I can't see why your rate should be as high as the
17 bank.

18 MR. MACDONALD: Well, there is another
19 reason why we should have a higher rate and that is
20 that the premium dollars are paid in to provide
21 insurance at a certain rate. By allowing this policy
22 loan, in our case to 15% of our policy holders, at
23 a preferential rate, they are borrowing money which
24 could be invested otherwise. And if it were invested
25 otherwise, there would be a higher return to the
26 other 85% of the policy holders. You are taking it
27 from the majority of policy holders by giving a
28 preferential policy loan rate.

29 MR. LAWRENCE: It's not preferential,
30 it's in the contract. You commit yourself to do this

1 at the very beginning. If you don't want to loan on
2 policies you don't have to. There is no law making
3 you, is there? Making you loan on your contracts?
4 Do you have to loan money on these things?

5 MR. SEDGWICK: It's an inducement.

6 MR. LAWRENCE: It's an inducement, yes,
7 but is it a law?

8 MR. SEDGWICK: Tell me if I'm wrong,
9 but if you write the policy -- I think this is so --
10 do you not stipulate that up to a certain figure,
11 about 90% of the cash surrender value, the policy
12 owner has a right to borrow?

13 MR. LAWRENCE: Yes, yes, but this
14 is only a contract. There is no law that I know of.

15 MR. MACDONALD (NDP): The life
16 insurance companies write this contract with the
17 stipulation.

18 MR. MACDONALD (LONDON): That's right.

19 MR. MACDONALD (NDP): I'm curious
20 to know why people go to the bank rather than borrow
21 directly from the insurance company.

22 MR. IRWIN: (Inaudible)

23 MR. MACDONALD: Does a bank normally
24 lend in excess of the cash surrender value? Is this
25 the reason why they would go to the bank rather than
26 come to you?

27 MR. MACDONALD (LONDON): Yes.
28 But on the other hand the banks won't always loan
29 on a policy while the insurance company itself would.

30 MR. MACDONALD: (NDP): I was going

1 to say, there are other things the bank would take
2 into account that the insurance company wouldn't.
3 They might not think you are a good risk --

4 MR. IRWIN: That's why they should
5 get a higher rate of return than the insurance
6 company does, because they have to take a larger
7 risk.

8 MR. MACDONALD: I'm not entering
9 the argument, I'm just explaining it.

10 THE CHAIRMAN: Mr. Tuck?

11 MR. TUCK: On the question of laws
12 requiring policy loans in relation to the contract --
13 I think you are quite right, there is no law
14 currently requiring it. There might be a move though
15 to have such laws; certainly they exist in many
16 states of the United States, insurers are required
17 to have policy loans in the contracts. I think that the
18 insurance supervisors of Canada might feel that they
19 should recommend certain legislation here requiring
20 it.

21 MR. SEDGWICK: Is it true, Mr. Tuck,
22 that without exception the companies that are
23 represented by your organization do lend on the cash
24 surrender value?

25 MR. TUCK: That's right.

26 MR. LAWRENCE: Is it also true that
27 your companies do not encourage these loans?

28 MR. TUCK: I think that's true in the
29 sense that they don't push the matter. We do, though,
30 point out to policy holders, and they point out to

1 policy holders that this is a policy provision
2 that they might find of value under certain circum-
3 stances. Their agents push it. Yes, I think many
4 of us push it.

5 THE CHAIRMAN: Yet a very small
6 percentage of the policy owners seem to take advantage
7 of it.

8 MR. TUCK: This is true, but I would
9 like to get back to the fact that they aren't all
10 aware of it. I think most of them make the (rest
11 of sentence inaudible).

12 MR. IRWIN: Mr. Chairman, I'm still
13 intrigued by this circumstance of the low rate of
14 interest available to borrowers and yet only 15%
15 of them -- supposing somehow or other people became
16 acquainted with this possibility and you suddenly
17 found your loans amounting to 30 or 40 or 50% of
18 total cash surrender available, would you take
19 any steps? Could you take any steps?

20 MR. MACDONALD (LONDON): I don't see
21 how we could refuse. We can delay them on it on the
22 basis that some companies do have a 60 day or 90 day
23 clause in the policy that the loan can be delayed.

24 MR. IRWIN: (Inaudible)

25 MR. MACDONALD (NDP): Normally how long
26 would it take from the time the policy holder
27 applied until he sees the money?

28 MR. MACDONALD (LONDON): On an average
29 loan the policy holder can apply at a branch office
30 -- if it were in London, a phone call would be all

1 that was necessary -- he would go to the branch office
2 and I would say probably a day or a day and a half.

3 MR. MACDONALD (NDP): He need not
4 give any reasons?

5 MR. MACDONALD (LONDON): That's right.
6 Say a normal size loan where there are no extenuating
7 circumstances, the cheque will be prepared and the
8 endorsement on the back also (next part of tape
9 inaudible).

10 MR. CHAIRMAN: It shouldn't vary
11 much even if the head office were located elsewhere?

12 MR. MACDONALD (LONDON): No. If
13 there were an emergency they could call from the
14 branch to the head office and obtain approval on
15 the status of the borrower in a matter of hours.

16 THE CHAIRMAN: Any other questions?

17 MR. ROWE: (Inaudible)

18 MR. MACDONALD (LONDON): If they miss
19 a payment they have 31 days to pay the money and if
20 at the end of 60 days you still haven't made the
21 payment the machinery is set up so that the premium
22 loan is automatically set up and you will be charged
23 interest on this loan from the end of the grace period
24 of 31 days.

25 MR. ROWE: (Inaudible)

26 MR. MACDONALD (LONDON): This, of
27 course, is geared to our new system, as the
28 companies are doing with the electronic computer,
29 where we are able to () automatically at
30 the end of the two month period.

1 MR. ROWE: (Inaudible)

2 MR. MACDONALD (LONDON): I've got
3 some other figures. In '63 there were \$16.9 million
4 in loans made and of that group 7.9 were cash and
5 8.9 were premium. But before the end of the year,
6 not necessarily in the same group, but 63% of the
7 loans were repaid during that period and, although
8 I haven't been able to check the figures out
9 completely, I would imagine a good number are
10 premium loans paid after this two month period.

11 MR. ROWE: (Inaudible)

12 MR. MACDONALD (LONDON): That was
13 the understanding I had.

14 In the same year policies
15 surrendered were 4,800,000 loans paid off.

16 THE CHAIRMAN: Any other questions?

17 A MEMBER: You say in 1963, 63% of
18 your policy loans were repaid?

19 MR. MACDONALD (LONDON): 63% policy
20 loans meaning both cash loans and premium loans
21 were repaid.

22 A MEMBER: Has this been consistent?
23 Do you have a situation where you can tell by
24 pattern or otherwise whether people are borrowing
25 on their policies so the maximum amount of 99%
26 or 95%, and are keeping their other insurance, both
27 at the same time? In other words, indicating a
28 certain insurance programme (rest of sentence inaudible)

29 MR. MACDONALD: (LONDON): I haven't
30 any figures on that. Someone else may have. This

1 figure of 63% is all loans repaid last year. These
2 were repaid prior to the policy maturing.

3 MR. REILLY: Would I conclude
4 correctly then that most of your loans are collected
5 in a year?

6 MR. MACDONALD (LONDON): I haven't
7 the figures available. I could check on that.

8 MR. REILLY: What is the average
9 term -- I mean loans on an insurance policy -- are
10 they usually for no more than a year or two or
11 three or do they run five or ten?

12 MR. MACDONALD (LONDON): I'm sorry
13 I haven't that.

14 MR. REILLY: Is there any limitation
15 in the length of time for which you can borrow?

16 MR. MACDONALD (LONDON): No, as
17 long as there is a cash value that exceeds the
18 indebtedness you can borrow for any length of time
19 you wish.

20 MR. MACDONALD (NDP): As long as
21 you keep your interest payments up?

22 MR. MACDONALD (LONDON): You
23 aren't even required to pay the interest as long as
24 the interest which is capitalized plus the loan does
25 not exceed the cash value of the policy.

26 THE CHAIRMAN: Mr. Irwin would like
27 to ask another question.

28 MR. IRWIN: The interest you referred
29 to chargeable is simple interest charged annually,
30 I believe?

1 MR. MACDONALD (LONDON): Yes, we
2 refer to it as simple interest on a day-to-day
3 basis which is capitalized on the unpaid balance
4 of the loan at that time.

5 THE CHAIRMAN: Any other questions,
6 gentlemen?

7 MR. REILLY: Mr. Chairman, about
8 how much loan was established when someone is
9 delinquent in his payments? Is this done by other
10 companies, do you know? Is this pretty well what
11 London Life -- is this done by London Life only?
12 Are other companies adopting this automatic loan
13 system?

14 MR. MACDONALD (LONDON): I can't
15 speak for every company.

16 MR. MACDONALD (NDP): I think it's
17 pretty universal.

18 THE CHAIRMAN: Anything else,
19 gentlemen?

20 MR. MACDONALD (NDP): Mr. Chairman,
21 may I ask, in the instance of your Company, what
22 is your average investment return?

23 MR. MACDONALD (LONDON): The net
24 average yield from invested assets last year was
25 5.54%.

26 MR. MACDONALD (NDP): What was the
27 net yield on policy loans?

28 MR. MACDONALD (LONDON): 5.19%.

29 THE CHAIRMAN: The rest of the brief
30 is devoted to mortgage lending, is that correct?

1 MR. MACDONALD: Yes.

2 THE CHAIRMAN: And we are going
3 to hear from Mr. Millman. I think then we will
4 take a five minute recess and then continue with
5 Mr. Millman.

6
7 ---SHORT RECESS

8
9 THE CHAIRMAN: We will now ask Mr.
10 Millman to carry on with the part referring to
11 mortgage lending.

12 MR. MILLMAN: The London Life is
13 one of the largest mortgage lenders in Canada in
14 respect to both annual new investment and total of
15 mortgages outstanding. We have mortgage offices
16 in most major cities from coast to coast and many
17 of them serve other communities as well. At the end
18 of 1963 our mortgage account stood at \$691,000,000
19 comprising 62,360 individual accounts. In recent
20 years we have generally been the largest lender under
21 the National Housing Act apart from direct lending
22 activities of Central Mortgage & Housing Corporation.
23 Of our total year-end investment, \$527,000,000 or
24 more than three-quarters of the total represented N.H.A.
25 insured mortgages and our Company's share of N.H.A.
26 joint loans.

27 Our mortgage investment approximated
28 69% of invested assets. For comparative purposes,
29 this figure was 65% in 1930 but declined to 16% in
30 1945. Since this latter year a substantial

1 proportion of Government of Canada bond issues which
2 we purchased during the war period have been liquid-
3 ated and largely re-invested in mortgages. As life
4 insurance companies require a minimum of liquidity,
5 we have found mortgages a highly desirable form
6 of investment from the standpoint of net interest
7 rate. There is, of course, virtually no prospect
8 of associated capital gain and always the possibility
9 of some losses, although the latter are minimized
10 under N.H.A. lending.

11 Appendix IV attached to our brief
12 outlines the extent of our actual cash advances in
13 each of those ten years, our mean mortgage investment
14 during each of those years, the year-end number of
15 employees in our mortgage organization, administrative
16 expenses, loan commissions and percentage of
17 over-all investment expense related to the mean
18 mortgage investment. You will notice that the latter
19 has remained very constant at just under one-third
20 of 1% for the past six years. This figure, of course,
21 makes no provision for possible future losses,
22 which have been negligible for 20 years or more but
23 were quite substantial during the 1930's and even in
24 the early 40's. There is presently evidence of an
25 increasing number of foreclosures, particularly on
26 N.H.A. loans, where many borrowers who experience
27 financial difficulties can no longer market their
28 property readily at a price sufficient to recover
29 at least some part of their slim equity. Even though
30 a large part, if not all, of the mortgage claim may

1 be recovered from CMHC, there are many additional
2 costs in the administration of default cases which
3 do not appear in the mortgage account.

4 We know our own lending costs are
5 by no means typical of the lending institutions as
6 a whole. In fact, we believe that they are below
7 average and among the lowest of all institutional
8 mortgage lends. You will notice there has been a
9 slight change in the wording of that from what you
10 have. That is in deference to you competitors. We
11 didn't feel that we should be quite as strong as we
12 were in that sentence. With a high percentage of
13 N.H.A. loans, which are generally for a 25-30 year
14 term with consequent very low principal repayments in
15 the early years, and many large conventional loans
16 to corporations, also for extended maturities, our
17 over-all repayments in a given year relative to our
18 total mortgage investment average about 5.5%. We
19 understand many lenders doing largely or entirely
20 conventional business have annual repayments amounting
21 to double or more this amount, namely, 11-12% and in
22 some cases even larger. These high repayment rates
23 necessitate a much heavier volume of new business to
24 achieve a desired year-to-year increase in mortgage
25 portfolio and accordingly original acquisition costs
26 must be amortized over a much shorter period.

27 In a company such as ours, where most
28 of our mortgage lending channels through our own mort-
29 gage offices, expenses divide into three categories,
30 naemly (1) servicing costs on existing loans; (2) our

own costs of securing business involving both local and head office appraisal, subsequent opening of accounts, periodic inspections and actual advances in the case of construction loans etc.; and (3) loan commissions to agents who in most cases bring the business to us.

Virtually all our loans are on a sinking fund basis involving equal monthly payments which include interest and some principal. With few exceptions we also collect one-twelfth of annual municipal taxes monthly and these taxes are then advanced by us when they fall due. On this basis our servicing costs are largely related to the number of loans on our books rather than the dollar volume. It is not possible to produce an exact figure, but we estimate that of 1963 total expenses, approximately \$952,000 related to servicing existing loans. With a mean of 61,000 loans on the books, this represents a cost of \$15.60 per loan. For comparative purposes, on recent block sales of mortgages by CMHC their charge is \$2.75 per month per loan or \$33.00 per annum where they are asked to retain the servicing. Our own costs represent around one-half of 1% annually on very small loans of about \$3,000 but are a negligible item on very large loans of, say, \$1,000,000 or more. With an average loan on our books of just about \$11,000, the average cost on an annual basis was .144% of our mean investment in 1963.

Of the remaining .165% of mortgage expense in categories (2) and (3), our own company

1 expenses under (2) amounted to .13% and loan
2 commissions under (3) to .035%. Both these costs,
3 however, and particularly the latter, are more
4 related to total volume of new money advanced, or
5 what might be considered as acquisition expenses.
6 On this basis, such expenses in 1963 were of the
7 order of 1.10%, composed of .87% in category (2)
8 and .23% in category (3). This latter figure was
9 apparently abnormally low and in general ranges
10 from .30 to .40, so that acquisition expense on
11 average is probably of the order of $1\frac{1}{4}\%$. With a
12 rapidly increasing portfolio it is very difficult to
13 determine the average term of a loan, but related to
14 the original amount it would appear that it might
15 be of the order of ten years in our own case and
16 therefore acquisition cost might represent about
17 one-eighth of 1% annually. For companies placing
18 only conventional loans and with a much more
19 rapid turnover, this cost might readily be of the
20 order of one-quarter of 1% or more.

21 We hope this information on our own
22 company's mortgage lending costs may be of some value
23 to you. We do realize that your primary interest is
24 in respect to possibly exorbitant costs by way of
25 bonuses required from borrowers and other more or
26 less hidden charges.

27 We have reviewed the brief of the
28 Dominion Mortgage & Investments Association presented
29 to you a year ago, as well as the following question-
30 ing and discussion. Certainly we operate within

1 the limits outlined by the Association in respect to
2 conventional loans. Generally the only deductions
3 from the face amount of the mortgage are solicitors'
4 fees and disbursements and, in Ontario, the fees are
5 not more than and in some instances less than the
6 tariffs established in the individual counties. These
7 costs are an out-of-pocket expense to us and as a
8 matter of convenience are charged to the mortgage
9 account as part of the total advance. The end result
10 is exactly the same as it would be if we advanced the
11 total loan to the borrower and required him to pay
12 the solicitors' costs directly. Obviously these
13 charges are in no sense a bonus.

14 It is not our normal procedure to
15 charge any appraisal fee. We do this only in two
16 communities, both of which are outside Ontario, and
17 in which it is the standard practice of virtually
18 all mortgage lenders. Elsewhere, including all of
19 Ontario, we consider the cost of appraisals, almost
20 all of which are made by our own salaried employees,
21 as a normal part of our acquisition costs.

22 Where a surveyor's certificate is
23 necessary the onus of obtaining it is placed on the
24 borrower, since it is equally essential to him. It
25 is our almost invariable practice to obtain credit
26 reports on prospective borrowers, but this minor item
27 is not charged to the mortgage account.

28 In only rare instances do we collect
29 a "stand-by" or "holding" fee, and if our loan
30 commitment, having been accepted, is eventually

1 processed the fee is refunded. We have had only one
2 or two disillusioning experiences where a borrower,
3 having accepted our offer and not having been charged
4 a holding fee, many months later calmly informs us he
5 has obtained his financing elsewhere. The practice of
6 refunding any "holding" fee, even if eventual loan
7 advances are postponed for a lengthy period, is much
8 more generous than in the case of corporate bond
9 issues where a holding fee without refund is frequently
10 paid if actual delivery of the bonds is delayed for an
11 extended period beyond the commitment date.

12 On conventional loans the only amount
13 which is in the nature of a "bonus" is the collection
14 of a charge when the borrower wishes to repay prior
15 to the maturity date of the mortgage. As outlined in
16 the Dominion Mortgage brief, this is a privilege
17 under the Canada Interest Act of all individual borrowers
18 at the end of five years regardless of the actual term
19 of the loan. The stipulated bonus is the equivalent of
20 three months' interest on the remaining balance of the
21 loan. Loans to corporations sometimes specify repayment
22 bonuses prior to maturity. With any substantial decline
23 in going mortgage rates the stipulated bonuses may not
24 adequately compensate for the future interest loss.
25 In all cases where there appears a legitimate reason
26 for requesting prepayment we endeavour to be reasonable
27 in our requirements.

28 On loans made under the National Housing
29 Act we are required by the Crown Corporation, Central
30 Mortgage & Housing Corporation, which administers the Act,

1 to add certain additional charges. For each dwelling
2 unit an application fee of \$35.00 per unit, whether
3 the loan is on a single dwelling, a duplex or a large
4 apartment building, must be paid in cash by the
5 borrower. While CMHC itself appraises and inspects
6 all properties, many of the companies do so as well for
7 their own satisfaction. Some lenders like ourselves
8 make most of their construction advances on an
9 "uninsured" basis, that is, the mortgage insurance
10 does not become effective until the building is
11 virtually completed. For all loans advanced in
12 uninsured instalments, \$9.00 of the \$35.00 fee is
13 remitted to the company. It should be recognized that
14 as all N.H.A. loans are on new construction, at least
15 three or four and sometimes many more inspections are
16 required in addition to the original appraisal.

17 In addition to the basic N.H.A. loan
18 there is charged to the mortgage account a mortgage
19 insurance premium of 2% in the case of instalment loans
20 for single swellings and owner-occupied suplexes, and
21 $2\frac{1}{2}\%$ on instalment loans for other multiple-unit
22 buildings. For completion loans the foregoing premiums
23 are reduced by one-quarter of 1% to $1\frac{3}{4}\%$ and $2\frac{1}{4}\%$
24 respectively. This premium is passed on to CMHC except
25 that the company retains one-quarter of 1% out of the
26 2% or $2\frac{1}{2}\%$ applicable to instalment loans as
27 compensation for the additional risk. That's because
28 of uninsured advances, the additional risk involved in
29 insuring our own advances during construction.

30 It should be noted that the borrower

1 does not pay the insurance premium immediately, but it
2 is an addition to his long-term liability.

3 Lenders under the National Housing Act
4 are not permitted to discount the original loan in any
5 way. The full amount of the loan must be advanced
6 including, of course, authorized disbursements for
7 out-of-pocket expenses. If the borrower should decide
8 not to draw down the full loan, interest of course
9 is charged only on the reduced amount. The lender
10 may subsequently sell the mortgage to another party
11 either at a premium or a discount, but this in no
12 way affects the borrower.

13 We hope we have amply described our
14 own company's mortgage lending practices, but we
15 are very willing to answer to the best of our ability
16 whatever questions you may have.

17 MR. SEDGWICK: Mr. Millman, I have
18 one or two questions because we covered the subject
19 pretty fully when the Dominion Mortgage people
20 made their presentation. But as to your company, may
21 I take it that you loan only on first mortgage
22 risks?

23 MR. MILLMAN: Yes. The only exception
24 to that might be a few blanket mortgages where we
25 retain out of the proceeds of our mortgage sufficient
26 to pay a first mortgage not yet due. Until that
27 prior mortgage is paid off it is a second mortgage,
28 but in total it's not more than --

29 MR. SEDGWICK: Yes. So that in
30 terms of loan length, you are first mortgage lenders?

1 MR. MILLMAN: Yes.

2 MR. SEDGWICK: Then are all your
3 mortgages amortized over their term, or do you have
4 what is called a balloon payment at the end of five
5 or fifteen years?

6 MR. MILLMAN: Until recently we
7 drew most of our convention loans, which we refer
8 to, of course, as loans aside from N.H.A. -- on a
9 five year term, because of the provisions of the
10 Interest Act, which permitted discrimination against
11 the company after five years. We have recently
12 modified that policy and they are now making loans
13 to individuals on a conventional basis, sometimes
14 synchronized for the same term as the amortization,
15 sometimes for ten, fifteen years on a 20-year
16 amortization period.

17 MR. SEDGWICK: As to the loans that
18 you have that become due in five years or ten years,
19 is it the policy of your company always to renew?

20 MR. MILLMAN: Yes.

21 MR. SEDGWICK: You don't insist on
22 this -- I mean presuming your experience with the
23 borrower is consistently good?

24 MR. MILLMAN: Assuming satisfactory
25 experience, yes.

26 MR. SEDGWICK: Yes, and satisfactory
27 values.

28 MR. MILLMAN: Yes, and that renewal
29 is arranged without expense. Perhaps on a large loan,
30 where for some reason we may wish the renewal agreement

1 registered, and then the only charge that is made is
2 our solicitor's rather nominal charge of drawing
3 the document up.

4 MR. SEDGWICK: Which would be little
5 more than the cost of the discharge -- it would be
6 a quite nominal fee.

7 Looking, sir, at your Appendix IV,
8 I see that in -- have you got it, your Appendix IV? --
9 I see that in 1954 your Cash Advances were 54 million.
10 You paid in loan commissions 240 thousand dollars odd,
11 and in 1963 it was 98 million in cash advances --
12 almost double -- but you paid only 229,000. Would
13 that be accounted for by the fact that you have
14 so many N.H.A. mortgages on which there is no loan
15 commission?

16 MR. MILLMAN: No really. The amount
17 of loan commission is not necessarily related
18 directly to the amount of cash advance. The
19 commission is payable on completion and finalization
20 of the loan. Now this 54 million might, to carry
21 this to the extreme, might all have been first
22 advances on loans not closed out until 1965 on
23 which loan commissions paid would be nothing because
24 loan commissions are not payable until the loan is
25 finalized or fully advanced.

26 MR. SEDGWICK: Yes, but that would
27 catch up with you --

28 MR. MILLMAN: Yes, it does catch
29 up over the years, but that does account in some
30 measure for fluctuations from year to year.

1 MR. SEDGWICK: Yes, I understand
2 that, but one perceives from '54 to '58 commissions
3 were considerably more, percentagewise, than they
4 have been in the last two or three years. Is it
5 that you pay a smaller rate of commission? Or
6 don't you pay commission on as many loans?

7 MR. MILLMAN: Well, we haven't quite
8 figured out why that is ourselves, Mr. Sedgwick, but
9 one thing that contributes to that is that in the
10 last two or three years many of our loans have been
11 for larger amounts, in amounts such as three or
12 four millions -- and it is a scaled commission.

13 MR. SEDGWICK: Oh. What is your top
14 commission? We have been much interested here in
15 what commission is payable or should be payable
16 for business. What is the top percentagewise that
17 you pay to someone bringing you an acceptable loan?

18 MR. MILLMAN: We pay 1% up to, or
19 on the first \$100,000.00, one-half of 1% on the
20 second and a quarter of 1% on the balance over that.
21 So it is a sliding scale.

22 MR. SEDGWICK: I see, so that on very
23 large loans -- and many of these would be -- that would,
24 of course, affect the percentage of commission,
25 wouldn't it?

26 MR. MILLMAN: Yes.

27 MR. SEDGWICK: I guess that's all
28 for me.

29 THE CHAIRMAN: Mr. Irwin?

30 MR. IRWIN: Yes, Mr. Chairman. I

1 wanted to ask a question relating to this problem
2 of comparing loan situations as between, say, a
3 life insurance company and some other lender. You
4 have, on page 6, described the cost to you of making
5 a loan and servicing it thereafter, and certain
6 charges which are made and paid by the borrower at
7 the beginning of the loan. For instance the borrower
8 pays the legal fee and he pays the inspection fee.
9 But all other expenses are borne by the company
10 itself, I understand?

11 MR. MILLMAN: We don't charge
12 a valuation fee here in Ontario. The only charge
13 to a borrower is really the legal expense of
14 guaranteeing his title and priority of advances and
15 so on. Appraisal -- we do our own appraisals by
16 our own salaried employees and don't charge an
17 appraisal fee.

18 MR. IRWIN: Then there are two types
19 of charges. There are charges made to the borrower
20 at the beginning of the loan, such as the legal fee,
21 and then there are all the other costs which are
22 borne by the company and not charged to the borrower
23 directly. Your stated rate of interest on the loan
24 then, say 7%, would be intended to include covering
25 such servicing costs?

26 MR. MILLMAN: Well, not specifically,
27 no, because --

28 MR. IRWIN: In other words you
29 charge 7% to recover your servicing costs?

30 MR. MILLMAN: Yes, in that sense.

1 MR. IRWIN: Some submissions that
2 have been made here claim the rate of interest that
3 they charge has to be, or the finance charge that
4 they make, has to be as high as it is to recover their
5 administrative costs. And the argument is put
6 forward that it would be incorrect to make a
7 calculation in terms of percent per annum which
8 includes those administrative charges. But this is
9 not true in your case. You are stating a rate percent
10 per annum which does include the administrative
11 charges?

12 MR. MILLMAN: Yes, I would say so.

13 MR. IRWIN: Can you see any distinction
14 between what you and what other people have said?

15 MR. MILLMAN: I'm not certain that
16 I have clearly in mind what type of situation you
17 are referring to other than -- of course, I think
18 I would prefer to talk only for ourselves. We feel
19 that the lower we can keep our administrative costs
20 the better the overall picture of the company's affairs
21 is and that reflects all down the line to policy holders
22 dividends, etc.

23 MR. IRWIN: To put it another way,
24 do you think it would be a desirable thing from your
25 point of view and from the point of view of the
26 borrower if you, let's say you make the loan at 5%
27 and then you add 2% to cover expenses. Do you think
28 that would be a sound approach to the loan contract?

29 MR. MILLMAN: I don't think we would
30 want to do that. I can't conceive of our operating

1 on that basis. We prefer this --

2 MR. IRWIN: I think the point I am
3 trying to make here is that when you state a rate
4 of interest you arrive at that rate because your
5 administrative costs are at least X -- in other
6 words, if your administrative costs went up
7 presumably you would raise the rate.

8 MR. SEDGWICK: I was going to
9 mention, Mr. Irwin, because you may have looked at
10 Appendix IV -- correct me if I am wrong -- taking
11 the last year, your administrative expenses are
12 approximately 1% --

13 MR. MILLMAN: .31.

14 MR. SEDGWICK: Yes. So that if you
15 were getting 7, your pure rate -- I think that's
16 what Mr. Irwin is driving at -- would be 6.69, isn't
17 that right?

18 MR. MILLMAN: Yes, I --

19 MR. SEDGWICK: Yes, that would be
20 your pure interest.

21 MR. MACDONALD: On general principle --
22 we're back to our old problem in this Committee as
23 to whether or not there is any difficulty in stating
24 the rate of interest which includes all costs?

25 MR. SEDGWICK: Yes, it does.

26 MR. MACDONALD: Your practice
27 suggests there is no difficulty and it is desirable,
28 from your point of view --

29 MR. MILLMAN: (Inaudible)

30 MR. MACDONALD: We will pursue it

1 with them.

2 MR. IRWIN: One further step along
3 that way, is that there other charges which are
4 charges to the borrower, legal fees, for example.
5 We might just restrict it to the legal fees. Why
6 not throw those in to the total Appendix IV as well
7 and this figure then becomes 33% -- I don't know,
8 something like that. Then when you state a rate
9 that's all the borrower is interested in. He's
10 heard the rate and makes the loan and that's it.
11 How do you distinguish between those charges which
12 you do charge the borrower and those charges which,
13 in effect, are included in your rate?

14 MR. MILLMAN: Well, solicitor's
15 costs are not our charges.

16 MR. IRWIN: How do they get it from
17 the appraisal that you do? What are they paid for --

18 MR. MILLMAN: Well, I think the
19 solicitor's charges are charged by the solicitor,
20 a solicitor, for searching the title and giving a
21 certificate that the owner has proper title to his
22 property. That is charged to the loan for convenience.
23 We have had situations where the borrower has insisted
24 upon receiving the full \$10,000.00 on a \$10,000.00
25 loan and giving us back a cheque for the amount of
26 the solicitor's costs and that is really what the
27 solicitor's charge is.

28 MR. MACDONALD: Is the solicitor
29 designated by you?

30 MR. MILLMAN: Yes, it is.

1 MR. MACDONALD: We sometimes get into
2 a discussion of this very complex issue of conflict
3 of interests. If the solicitor is drawing up the
4 deed, which is to protect the interests of the
5 borrower, it looks a little strange that he is your
6 designee.

7 MR. MILLMAN: Well --

8 MR. MACDONALD: I think your case
9 for an extra charge is if the borrower, in effect,
10 says, "Here's my lawyer, he's searching the deed,
11 he's making certain that my interests are being
12 protected".

13 MR. MILLMAN: He really isn't. He's
14 protecting, he is protecting his interests but
15 incidentally at the same time he's protecting the
16 borrower's.

17 MR. MACDONALD: Isn't this where,
18 from a legal point of view or from the technical
19 point of view, it's rather difficult?

20 MR. MILLMAN: Well --

21 MR. MACDONALD: There is a point of
22 question?

23 MR. MILLMAN: Yes, there may be. I
24 think really what is said to him is that as part of
25 borrowing this money you have to prove proper title,
26 priority of mortgage, etc., etc., to our satisfaction.
27 And we are satisfied that that was done through a
28 solicitor.

29 MR. MACDONALD: He's working for
30 you but he's paid for by the borrower?

1 MR. MILLMAN: He's working for the
2 borrower too, protecting the borrower by the fact
3 that it's his house, and primarily for his protection.

4 MR. MACDONALD: I don't know how
5 important this point is --

6 MR. SEDGWICK: Percentagewise it
7 doesn't greatly matter. If you are borrowing
8 \$15,000.00 and the legal fees are, shall we say,
9 \$150.00 and you amortize that over the term of the
10 mortgage, in percentage terms it's minuscule. I
11 can only say it's an immemorial practice that the
12 borrow pays the cost to certify title just as he
13 pays the cost of the survey, which is for his
14 protection too, to make sure his house stands on
15 the plot that he is buying. He pays that too.

16 MR. MILLMAN: Well, yes, but he
17 doesn't pay that through the lender always.
18 Sometimes he --

19 MR. SEDGWICK: Yes, many times he
20 has a survey which you will accept.

21 MR. MILLMAN: That is true.

22 MR. IRWIN: Mr. Chairman, may I
23 pursue this for just a moment. It may be traditional
24 for legal fees to be paid the way they are, but from
25 the point of view of the contract between the borrower
26 and the lender, does it really make any difference
27 to you if -- you might describe to the borrower
28 exactly what happens, but -- it really wouldn't make
29 any difference seeing as you are going to largely
30 absorb the cost anyway in your stated rate -- supposing

1 your stated rate was 7% plus legal fees, it wouldn't
2 really make much difference if you said it was
3 7 1/8 including the legal fees?

4 MR. MILLMAN: Well --

5 MR. IRWIN: If all the costs were
6 included in the stated rate -- whatever that stated
7 rate may be?

8 MR. MILLMAN: Well --

9 MR. IRWIN: Would there be any
10 objection to doing that?

11 MR. MILLMAN: I don't -- I'm not
12 quite sure if I understood you correctly.

13 MR. IRWIN: Really what I'm getting
14 at is this. In other situations that have come
15 before the Committee, say a mortgage situation, and
16 the lender says, "I will loan you \$10,000.00 and
17 the rate will be 7%, but I'm going to charge you
18 legal fees, inspection fees, bonus, commissions,
19 administrative charge, this, that and the other
20 thing", and the guy ends up with \$8,000.00 that
21 he actually gets in hand and he pays back ten
22 at 7%. Now the problem is what real rate of
23 borrowing money is the man paying. He doesn't know.
24 Now, it seems to me we can resolve this question if
25 what is to be covered by the stated rate -- the
26 borrower is at a loss in the lending situation.
27 So that if you, for example, who include most of
28 your charges in the stated rate, included all of your
29 charges in the stated rate, and that became the
30 practice, for everybody, then the borrower is able to

1 compare, when somebody says, "I will loan you
2 \$10,000.00 at 7%", and somebody else says, \$10,000.00
3 at 15%, he has something to compare. That's why
4 it does seem to me to be important to establish
5 whether there is any reason why you should not
6 include all charges and set your rate accordingly.
7 Then there would just be one contract, one rate,
8 one amount. Would you see any objection to so
9 doing?

10 MR. SEDGWICK: It sure would make
11 the mortgages very complicated, there would be six
12 plus a fascinating fraction. Because if you
13 take a thousand dollar mortgage and you divide
14 it by the term and add it to the interest, you get
15 the interest rate as being 6. point something,
16 something, something, which would make the computation
17 infinitely more difficult.

18 MR. IRWIN: I make this point
19 though, Mr. Sedgwick -- when you get the fraction of
20 three and four and five and ten percent, then it
21 does become very significant.

22 MR. OLIVER: Well, the legal fees
23 would vary, wouldn't they?

24 MR. MILLMAN: Yes, that's true.

25 MR. OLIVER: Yes, depending on the
26 amount of work to do and depending on the size of
27 the loan.

28 MR. SEDGWICK: It would be very
29 difficult to do and the man would still pay them.
30 Whether he pays them the cash at the time or as a

1 deduction from the loan or amortized over the term
2 of the loan as additional interest, you would pay
3 them just the same.

4 MR. MACDONALD: Mr. Chairman, I
5 don't want to pursue this unduly, but my questions
6 weren't directed to the amount involved at all. I
7 agree that it is a small amount, but I can think
8 of a legal firm that got a considerable amount of
9 unfavourable publicity in the Province because
10 they were solicitors for a construction company and
11 when it became known that they were also solicitors
12 for the prospective buyers of this construction
13 company (rest inaudible). Now, if the lawyer is
14 the designee of the company, just to pursue the
15 theory back of Mr. Irwin's case for a moment --
16 if he is a designee of the company, the company
17 says, "I will charge you 7.003% and that means it
18 covers everything including the lawyer". I think
19 in principle it would be better because he is
20 working for the company and if he has to make a
21 choice between working for the company and working
22 for the prospective borrower, he is working for the
23 company. They designated him.

24 MR. MILLMAN: That is true.

25 MR. WHICHER: You couldn't give the
26 borrower a choice of three or four lawyers? Like
27 for example, you give the borrower an opportunity
28 to insure with maybe fifty different insurance
29 companies -- you give him his choice in that.

30 MR. MILLMAN: That's not uncommon

1 practice, sir, to have a half a dozen lawyers in --
2 well, two or three lawyers where --

3 MR. WHICHER: Yes, I think that
4 would take some of the sting out of it, if they
5 had a choice.

6 MR. ROWE: (Inaudible) Do you
7 see anything that would really be hard to do?

8 MR. MILLMAN: Well, I think
9 it would be, from Mr. Sedgwick's point of view,
10 it might be acceptable to --

11 MR. WHICHER: You see, though,
12 the thing is it may be difficult to do, but it
13 may be necessary to protect the public when somebody
14 is paying a \$2,000.00 bonus for a \$10,000.00
15 mortgage. I know this isn't done by yourself, but
16 (rest inaudible)

17 MR. MILLMAN: Well, I don't think
18 we can do it.

19 MR. ROWE: I can see one objection
20 to including the legal fee at the beginning. Say
21 you amortize that over the normal period of 20 years
22 and it's worked out assuming the mortgage will be
23 paid off over the 20 years, and then it's paid off
24 at the end of ten years, it would be rather difficult
25 to figure out that one shot payment and figure out
26 exactly how much it would be at the end of ten years.
27 (Rest inaudible)

28 MR. WHICHER: (Inaudible)

29 MR. MACDONALD: But actually, Mr.
30 Chairman, our problem in the Committee is that the

1 real difficulty in disclosure of costs doesn't arise
2 with the conventional companies, it arises in the
3 infinite range of companies in the field. It has
4 been suggested that they are fringe companies. I
5 thought some of them are fringe, but some of them are
6 pretty respectable to be fringe. If we, at the
7 legislative level feel that to cope with the so-called
8 fringe operators who have all these extra charges,
9 are looking for something that could be put in a
10 statute, it's going to be difficult for us to say
11 that this applies to this company, which has varying
12 degrees of fringe fall, but it doesn't apply to you.
13 This is something of a problem for the Committee
14 to go over to consider recommendations.

15 MR. WHICHER: It might be better
16 to charge 8% instead of $7\frac{1}{4}$ and include all the charges.
17 A fellow at least would know exactly what he is going
18 to pay. Now maybe, as Mr. Sedgwick suggested, it
19 should be a tenth or a twentieth or something, but
20 then the fellow knows what he is paying.

21 THE CHAIRMAN: Mr. Bukator, do you
22 have a question?

23 MR. BUKATOR: Yes. If we are thinking
24 about the fringe ones who charge $87\frac{1}{2}\%$ that we found
25 here last year. They are fringe. (Laughter).

26 The question I would like to ask is
27 what is conventional loan interest rate now? About 7?

28 MR. MILLMAN: Seven or $6\frac{3}{4}$, particu-
29 larly with larger loans.

30 MR. BUKATOR: N.H.A. would be what?

1 MR. MILLMAN: Six and a quarter.

2 MR. BUKATOR: Six and a quarter.

3 This 2% that you add on for insurance on an N.H.A.
4 for the gross amount, did you people ever calculate
5 the difference between a conventional and an N.H.A.
6 with adding the 2% to N.H.A. and then charging interest?
7 Is there that much of a spread? I was wondering if
8 actuaries who are so keen with their pencils had
9 calculated that too? N.H.A. is the mortgage which
10 we all look for, naturally, but a conventional I
11 think is also a good mortgage at 7% or whatever the
12 case might be if you are not paying the 2% as you
13 do in an N.H.A. I was wondering what the spread was
14 between the $6\frac{1}{4}$ and 7, actually. Does anybody in your
15 group know that? I don't suppose it would be too
16 hard to get if we wanted it, some particular group
17 could calculate that very quickly for us, I imagine,
18 Mr. Taylor. I have so often heard so much about the
19 N.H.A. because they seem to be quite -- but with the
20 2% added to the N.H.A. and it comes to $6\frac{1}{2}$, let's say,
21 I don't think the spread between that and the 7% is so
22 great or anything at all. You don't have the answer
23 to that?

24 MR. MILLMAN: I'm sorry, I don't.

25 MR. BUKATOR: In mortgage loans, is
26 the charge the same for anywhere throughout the
27 Province?

28 MR. MILLMAN: The charge?

29 MR. BUKATOR: Interest charge.

30 MR. MILLMAN: Interest charge? There

1 are one or two locations where rates tend to perhaps
2 be steeper. One is (rest of sentence drowned out by
3 ambulance in background).

4 I know of no -- in first mortgage
5 rates -- a spread of more than a quarter of 1%
6 because of geographic location and then almost
7 invariably -- I would say generally, for all practical
8 purposes --

9 MR. BUKATOR: The spread is no more
10 than a quarter?

11 MR. MILLMAN: I would think not.

12 MR. BUKATOR: You see, in earlier
13 testimony we have had indicated to us that for any
14 areas outside the metropolitan area the rate was
15 even as much as 1% higher. And it seems to me there
16 is an inequity in this. The people are borrowing
17 back their own money to the extent that they are
18 borrowing from a pool that the people of the Province
19 collected, to which they are contributing. And if
20 they happen to live in northern Ontario their charge
21 is more.

22 MR. MILLMAN: Well, we haven't been --
23 actually you are asking the question of the wrong
24 company -- we are active in Sudbury and up there we
25 are getting $7\frac{1}{4}\%$, occasionally $7\frac{1}{2}\%$ and down here we are
26 getting $6\frac{3}{4}\%$ and 7. In our own experience, and I
27 can only speak for that, I think it's about one half
28 of 1%. I wouldn't like to say that this is typical
29 of the industry because we are not too active in
30 the smaller places.

1 MR. BUKATOR: In the areas where you
2 don't go in.

3 MR. MILLMAN: Yes. Several in the
4 smaller towns in around western Ontario we don't go in,
5 because it's physically impossible to service every
6 place, that's all. It's not discrimination against
7 anything. It's a physical impossibility to cover the
8 whole of Canada, every town and village.

9 MR. BUKATOR: Well, if a big company
10 like you can't service them, how do you expect the
11 little company -- (rest inaudible).

12 MR. MACDONALD: Mr. Chairman, I
13 would like to ask a question in reference to the
14 third paragraph on page 8, where you state: "On
15 conventional loans the only amount which is in the
16 nature of a "bonus" is the collection of a charge when
17 the borrower wishes to repay prior to the maturity date
18 of the mortgage". I assume from that that all of
19 your mortgages do have a clause which permits payment
20 in advance?

21 MR. MILLMAN: No, they don't. But
22 we feel from a public relations point of view if we
23 are asked to accept that money and there is a good
24 reason for doing it, that we should, generally
25 speaking, be prepared to cooperate given proper
26 reimbursement for the cost for reinvesting the money.

27 MR. MACDONALD: What would your
28 charge be?

29 MR. MILLMAN: Well, we have a --
30 before I get on that, sir, I would just like to say

1 that we would, if one of our borrowers wrote asking
2 us to accept payment in full of their mortgage with
3 no reason, we would refuse. If he came back and
4 said, well, if you don't -- on the grounds that there
5 is no provision in the mortgage -- if he came back
6 and said, "If you don't, you are going to block a sale.
7 I have this house up for sale and they need an 80%
8 loan which I know you can't give them", and so on,
9 then we usually take our money. But we feel that we
10 are entitled to an additional charge to cover the
11 cost of reinvesting that. Probably, or possibly,
12 at a lower rate of interest. And the lower rate
13 of interest, not for one year, but for the unexpired
14 term of the mortgage.

15 MR. MACDONALD: For practical purposes,
16 mortgages become open at the end of a five year
17 period? Is that true?

18 MR. MILLMAN: No, I don't think that's
19 quite true. Under the Interest Act, any loan to an
20 individual can be paid off any time after the fifth
21 year, as I understand it, with a bonus of three months'
22 interest. That's not at five year intervals, that's
23 any time. It may be paid in the sixth year or
24 seventh year. But loans to a corporation for a
25 longer period than five years cannot be paid off
26 except under the terms of the mortgage contract.

27 MR. MACDONALD: Is your charge in
28 the range of three months' interest?

29 MR. MILLMAN: Well, our charge, and
30 this is a guide only, we vary it according to the

1 circumstances and the worthiness of the case, but
2 our usual scale of bonus for prepayment ranges
3 from 4% during the first year -- now that is, we have
4 had no chance to amortize any of our acquisition
5 costs and we have to turn around and start things
6 all over again. We charge 4% the first year, 3½ the
7 second year, 3 the third, 2 the fourth and 3 months' interest
8 the fifth. Now that's, as I say, not rigid by any
9 means.

10 MR. MACDONALD: That's three months
11 of the unpaid balance?

12 MR. MILLMAN: Yes. All these
13 percentages are of the unpaid balance.

14 (Rest of belt inaudible)

15 MR. MILLMAN: The contract reads
16 five, but at the discretion of the company it can
17 be changed to ten.

18 THE CHAIRMAN: Mr. White?

19 MR. WHITE: Mr. Chairman, page 9,
20 the second last paragraph. It says, "The borrower
21 does not pay the insurance premium immediately, but
22 it is an addition to his long-term liability. In the
23 situation where you have a builder borrowing under
24 N.H.A., wouldn't this insurance be charged, deducted
25 from the (rest of sentence inaudible)

26 MR. MILLMAN: Well, it's paid insofar
27 as CMHC is concerned immediately, but I think the
28 inference here that the borrower does not pay that
29 immediately. It becomes part of the total indebtedness
30 that is amortized over 20 or 25 years.

1 MR. KERR: (Inaudible) I think that
2 part of the huge premium is this charge deducted
3 from the loan he eventually gets. (Rest inaudible)

4 MR. MILLMAN: What this is intended
5 to indicate here is that just under the circumstances
6 that you have outlined, the maximum house loan, for
7 instance, on a four family house is \$58,600.00 and
8 the 2½% premium brings that up to 59,012.00, I believe
9 it is, or some such figure. Well, I come along as
10 a purchaser of that house and I assume the mortgage
11 of 59,012.00 which includes the premium of \$312.00 and
12 I have that entire 59,012 including the 312,
13 amortized over 25 years, so that from my point of
14 view -- (Next section of belt inaudible)

15 MR. KERR: Do you do any lending
16 under maximum loans, where your company, I assume,
17 would lend up to 66 2/3% and then possibly some
18 other company would eventually bring the amount of
19 the loan to something over 80% and then you charge,
20 I think, a quarter of a percent interest over the
21 conventional rate?

22 MR. MILLMAN: We are not as yet
23 operating under that. We have been approved as
24 a lending institution by the Insurance Company of
25 Canada who is insuring the top proportion of loans,
26 but we have not operated under that.

27 MR. KERR: It's a very convenient
28 thing because you are eliminating the necessity to
29 arrange second mortgages at a very high interest
30 rate.

1 MR. MILLMAN: I think it was
2 conceived probably with that in mind.

3 MR. BUKATOR: Are there any areas
4 where -- to follow up what the gentleman just
5 said -- are there any areas where you approve --
6 I know you are not in the business yet, but an
7 80% mortgage on old homes? Do you have mortgages
8 on old homes?

9 MR. MILLMAN: We don't certainly
10 restrict our mortgage lending to new houses. We
11 certainly don't like to -- and this is by no means
12 inflexible, but we don't like to make loans on homes
13 over 20 years old.

14 MR. BUKATOR: So there are companies
15 now that are giving 80% on old homes?

16 MR. MILLMAN: We are not operating
17 under that scheme as yet.

18 MR. REILLY: Mr. Chairman, I'd like
19 to pursue this for just a moment. Is that because
20 you are not listed under the trust organization,
21 under the Trust Act, and you can be restricted to
22 66 2/3%. Is that because the London Life and other
23 insurance companies don't come under that Act?
24 Are you restricted to 66 2/3rds?

25 MR. BUKATOR: As I understand it
26 Mr. Millman says that they are about to enter or
27 close to it, but they are not doing it yet.

28 MR. MILLMAN: Yes. Under this scheme
29 that you have referred to, in lending.

30 THE CHAIRMAN: Anyone else?

1 Is Mr. Tuck still here?

2 Who has the next brief which you
3 wish to hear?

4 MR. KROPF: If the Committee has
5 time, we would appreciate it if Mutual Life of
6 Canada could present their brief in view of the
7 fact that they did come from out of town.

8 THE CHAIRMAN: That was my under-
9 standing. Well, they can go ahead now.

10 MR. REILLY: Would the government
11 part with an air conditioner for this room for a
12 couple days a month?

13 THE CHAIRMAN: Well now I should
14 tell the Committee that last year I endeavoured to
15 have one installed here and we didn't get very far.
16 We suffered through this heat all last year and it
17 looks as though we may have to be doing the same
18 thing again this year. However, I will make a
19 renewed effort to see if we can. Even a fan would
20 be a little help. When you consider the number of
21 meetings which are held here in these rooms, I don't
22 see why we haven't got an air conditioning unit
23 here which is in operation all year around. Especially
24 when you get a hundred people or so in here and
25 they are all smoking, it's pretty damned uncomfortable.

26 MR. SEDGWICK: Especially cigar smokers.

27 THE CHAIRMAN: Would you like to
28 introduce yourself to the Committee and carry on?

29 MR. KROPF: Thank you, Mr. Chairman.

30 I am D. L. Kropf of The Mutual Life Assurance Company

1 of Canada.

2 The Company, Canada's first mutual
3 life insurance company, was established in 1869
4 with its Head Office at Waterloo, Ontario. The
5 first policy loans were granted in 1874. In 1897
6 the Company led the industry in Canada in including
7 the automatic premium loan provision in its policies.

8 At the end of 1963 the Mutual Life
9 had insurance in force of \$4 billion of which \$1.9
10 million or 48% was on the lives of Ontario residents.
11 Premium income for 1963 amounted to \$87 million of
12 which 54% is derived from Ontario. The Company's
13 assets at the end of 1963 stood at \$830 million of
14 which 51% is invested in the Province.

15 THE CHAIRMAN: Mr. Kropf, would
16 you speak up a little. It is very difficult with
17 the traffic here and I am afraid our PA system isn't
18 as good as it might be. It is a little difficult
19 sometimes to hear members of the Committee. Please
20 just keep that in mind.

21 MR. KROPP: The next page is a list
22 of the officers and directors which I shall not read.
23 Page 3 is a table showing the relationship between
24 policy loans and the assets of the Company for the
25 past 35 years. I think it might be of interest to
26 the Committee to notice that during the depression
27 years there was a high of 21.42% of assets out on
28 policy loans. The low point, prior to the '50's
29 was reached in 1949 and then again during the
30 mild, temporary recession in the mid '50's there is a

1 high point of 6.03% of assets which has again reduced
2 to the present rate of 5.25.

3 The next page is a statement of our
4 policy loan account which indicates the amount of
5 loans, money advanced for cash loans and automatic
6 premium loans. The total loans outstanding in the
7 last column will agree with the previous table.
8 Payments on principal and interest, divided into two
9 parts. One is cash paid to the company at end of
10 loans year by year and the other amounts are
11 repayments which result from terminations of policies
12 such as maturities and death claims and cash surrender.

13 MR. REILLY: Before you change
14 the page, Mr. Chairman, I was wondering how long
15 has this premium automatic loan been in effect?

16 MR. KROPP: Since 1897.

17 We included extracts from our policies
18 showing loan provisions. I will read them if you
19 wish, Mr. Chairman. They have been gone over pretty
20 well by others and they are the same essentially.

21 Page 6 is our policy loan procedure.

22 The policyholder may secure a cash
23 loan by submitting an application to the Company
24 usually through a Branch Office. A copy of the
25 application is attached at the back of the brief.
26 If the policy is payable to a preferred beneficiary the
27 loan application must also be signed by the beneficiary.
28 The policy may be required for examination at the
29 Branch Office.

30 I might say that some of our older

1 policies require that those policies be turned over
2 to the Branch or the Company for examination. Our
3 later policies do not have that requirement.

4 The cheque is issued at the Head
5 Office of the Company to the policyholder and
6 preferred beneficiary, if any. The cheque is normally
7 mailed to the policyholder on the day following
8 receipt of the application at the Head Office of the
9 Company. Although our policies permit deferment of
10 the granting of a loan, the Company has never taken
11 advantage of this provision.

12 I might add, Mr. Chairman, that
13 during the period 1929 to 1930 when there was almost
14 a run on insurance companies, there was no deferment
15 other than the fact that the work load delayed the
16 issuing of the cheques at times.

17 There are no repayment requirements
18 but the policyholder is encouraged to make arrangements
19 for repayment of the loan. The Company will accept
20 payment in full or in part at any time. Periodic
21 payments of any size convenient to the policyholder
22 are accepted. If no payments are made on principal
23 or interest the indebtedness may eventually exceed
24 the cash surrender value and the policy will then
25 lapse.

26 A statement showing the amount of
27 loan and interest at the policy anniversary is mailed
28 to the policyholder each year. A sample of this
29 notice is also attached. Where a premium is not paid
30 by the policyholder and there is a cash value in the

1 policy the premium will be charged as a loan in
2 accordance with the automatic premium loan provision.
3 The policyholder is notified, when this has been
4 done, by a special notice of which a sample is
5 attached.

6 Interest on cash loans is charged from
7 the date the cheque is issued and on automatic premium
8 loans from the end of the days of grace allowed for
9 payment of the premium. While the rate of interest
10 is 6% at present, which is the maximum rate allowed
11 by the provisions of our policies, the rate in effect
12 from April 1, 1945 to September 15, 1956 was 5%.

13 Interest is charged on the unpaid balance only and
14 if not paid is capitalized on the policy anniversary.

15 Copies of the ninety-fourth annual
16 report of the Company which was mailed to each
17 policyholder, and our ninety-four years statistical
18 record, are appended to this submission.

19 Are there any questions, sir, I
20 would be glad to answer them.

21 MR. SEDGWICK: You were here when
22 the gentleman from the London Life made his
23 presentation, were you?

24 KROPF: Yes, sir.

25 MR. SEDGWICK: It seems to me in
26 reading yours that your policy or procedure is
27 almost identical to theirs. Is that correct?

28 MR. KROPF: That's correct.

29 MR. SEDGWICK: Yes. The only
30 difference between the two might be yours is a

1 completely mutual company, is it not?

2 MR. KROPF: That is correct.

3 MR. SEDGWICK: It has no shareholders?

4 MR. KROPF: No shareholders, no.

5 MR. SEDGWICK: Whatever profits
6 there are are divided amongst your policyholders?

7 MR. KROPF: That's correct.

8 MR. SEDGWICK: So far as policy
9 loans are concerned, your method of procedure
10 corresponds almost precisely with that of London Life,
11 is that correct?

12 MR. KROPF: That's correct.

13 MR. SEDGWICK: So the answers he
14 gave, I take it you would agree with?

15 MR. KROPF: That's right.

16 MR. SEDGWICK: That's all, thanks.

17 THE CHAIRMAN: Mr. Irwin? Mr.
18 Whicher? Mr. Bukator? Mr. MacDonald?

19 MR. MACDONALD: Do I assume from
20 your comments on page 6 that notwithstanding the
21 revision in the law two years ago that applications
22 for loans must be signed by the preferred beneficiary?

23 MR. KROPF: If there is a preferred
24 beneficiary, the preferred beneficiary must sign it.
25 But with the coming into force of the amended statutes
26 on July 1st, 1962 there are no preferred beneficiaries
27 on policies issued since that date so a man could
28 borrow on his own signature on a policy issued since
29 July 1st, 1962.

30 MR. MACDONALD: Just to display

1 my ignorance, what is a preferred beneficiary?

2 MR. KROPF: Under the old insurance
3 statutes the preferred beneficiary was wife, husband,
4 children, grandchildren, adopted children and
5 children of adopted children.

6 MR. SEDGWICK: And then beneficiaries
7 for value also had a preferred position.

8 MR. KROPF: They have a vested
9 interest actually.

10 MR. BUKATOR: I can understand
11 that, where the beneficiary for value, because he
12 has an interest in it, but so has the wife.

13 MR. SEDGWICK: Until 1962. And
14 the sons in their name.

15 MR. MACDONALD: Do I assume from
16 your presentation that you have no mortgage loans
17 at all?

18 MR. KROPF: Oh yes, we have mortgage
19 loans, sir, but we understood from Mr. Tuck that
20 our presentation would primarily be for policy loans.
21 If there are any particular questions or points you
22 would like us to deal with on mortgages we will be
23 glad to.

24 MR. REILLY: Can I come back to
25 the one that I put to the previous witness? What is
26 the rate that you might charge from what is described
27 as outlying areas? The additional rate that you
28 might charge to outlying areas, the hinterlands?

29 MR. KROPF: That is a question, sir,
30 that I cannot answer since I have had nothing to do

1 with mortgage loans whatsoever. My part of the
2 business has always been with the insurance end
3 and not the mortgage investments. Sorry I can't
4 help you there.

5 MR. REILLY: I might be able to
6 help Mr. MacDonald. The Ontario Royal Trust
7 Company charges more money for mortgages right up
8 in the same area.

9 MR. MACDONALD: That only emphasizes
10 the inequity is all across the board.

11 MR. REILLY: It costs them more
12 money to operate, greater risk.

13 THE CHAIRMAN: Mr. White? Mr. Kerr,
14 Do you have any questions?

15 MR. KERR: No.

16 THE CHAIRMAN: Well that's all.
17 Thank you very much for reading the brief to us
18 today. We appreciate your being with us.

19 Gentlemen, that is all we have
20 for this afternoon. We will meet here tomorrow
21 morning at ten o'clock. This meeting is now
22 adjourned. I would ask the Committee members if
23 they would wait or come back in about five minutes.

July 28, 1964

1 THE CHAIRMAN: Having a quorum, we
2 will proceed with the 18th meeting of the Committee
3 and we are going to hear first from Mr. G. R. Fraser
4 who is with the Excelsior Life Insurance Company. Mr.
5 Fraser?

6 Would you proceed with your remarks,
7 please, Mr. Fraser?

8 MR. FRASER: Mr. Chairman and gentlemen,
9 I have a brief statement relating to policy loans from
10 the point of view of Excelsior Life Insurance Company.

11 We are a company who was incorporated
12 in 1889 under the laws of the Province of Ontario and
13 commenced to write business the following year. We
14 are now licensed in all ten Canadian Provinces and we
15 write business only in Canada.

16 In 1963 we issued new insurances
17 totalling \$141 million, consisting of over \$81 million
18 in individual policies and almost \$60 million under
19 group contracts.

20 At December 31st, 1963 our business
21 in force amounted to \$844 million, of which \$633 million
22 was in respect of individual policies and the
23 remainder in group contracts. Our 1963 premium income
24 was \$17 million, of which \$13 million was in respect
25 of individual policies and the remainder from group
26 and health contracts. Our assets at December 31st,
27 1963 totalled \$145 million, consisting of \$79½ million
28 in securities, \$50 million in mortgage loans, \$4½
29 million in real estate, \$3½ million in cash and
30 miscellaneous items and \$7½ million in policy loans.

1 At December 31st, 1963 the ratio of
2 policy loans to reserves was 6.4%. At that date we
3 had 139 individual policies in force and 18% of such
4 policies had a policy loan then outstanding. The
5 average loan at that date was just below \$300.00.
6 We estimate that 40% of the total amount of outstanding
7 loans represent automatic premium loans. The terms
8 and conditions of policy loans are clearly set forth
9 in our policies. Interest on the loan is the only
10 cost to the policyholder and the rate charged may not
11 exceed 6% per annum.

12 During the period June, 1944 to
13 September, 1952 -- a period of low interest rates --
14 we charged interest at only 5%. While the rate of
15 interest charged to the policyholder is currently
16 6%, the net rate which we realize on policy loans
17 after charging administrative expenses is appreciatively
18 less than 6% and less than the net return which we
19 obtain on our total assets in 1963.

20 We encourage policyholders to repay
21 their policy loans even though they are not obliged
22 to do so. Partial payments of \$5.00 or more are
23 accepted either periodically or at the policyholder's
24 convenience. We follow this liberal practice because
25 we believe that policy loans which are not being
26 repaid may eventually cause the policy to lapse.

27 Our policy loans are a legal invest-
28 ment. We regard them as a service to our policyholders
29 whereby emergency funds can be made available to them
30 with a minimum of inconvenience and at a reasonable rate

1 of interest.

2 Furthermore the automatic premium
3 loan feature in our policies serves to extend the
4 period during which the policy may be continued in
5 force thus enabling us to pay many claims which we
6 would otherwise be unable to pay.

7 I will be glad to answer any questions.

8 THE CHAIRMAN: Thank you very much,
9 Mr. Fraser. Mr. Sedgwick, do you have any questions?

10 MR. SEDGWICK: Mr. Fraser, I shall
11 be very short. You do not say anything about the
12 mortgage investments of your company. May the
13 Committee take it that your company does invest
14 in first mortgages on real estate?

15 MR. FRASER: Yes, we do. I'm not
16 in the mortgage end of the business so I have not
17 commented on that.

18 MR. SEDGWICK: I see. Are you
19 reasonably familiar with it? What I was going to ask
20 you is whether there are any significant differences
21 between the policy of your company in regard to
22 first mortgage investments and the policies of other
23 companies such as the London and the Mutual whom we
24 heard yesterday?

25 MR. FRASER: My Treasurer is here
26 who is familiar with that. May I ask him that?

27 MR. CARNAGIE: No significant
28 differences.

29 MR. SEDGWICK: No significant differ-
30 ences. Your rates would be comparable, I assume, and

1 are your mortgages --

2 THE CHAIRMAN: Would you care to
3 come up closer to the microphone? We can't pick
4 it up on the tape otherwise.

5 MR. CARNAGIE: There are no signifi-
6 cant differences in policy. We don't invest on a
7 countrywide basis in mortgages.

8 MR. SEDGWICK: Do you confine your
9 business geographically?

10 MR. CARNAGIE: Yes, to certain
11 segments, such as the area around this part of the
12 world, Winnipeg, London, Montreal and Vancouver.

13 MR. SEDGWICK: Metropolitan areas.

14 MR. CARNAGIE: On occasion we would
15 go as far as Whitby or Oshawa, Hamilton and other
16 parts, but basically when I say metropolitan area
17 I mean the area which can be conveniently served
18 from our home office at Toronto.

19 MR. SEDGWICK: And as to amortization,
20 are your mortgages amortized over their life?

21 MR. CARNAGIE: They are conventional
22 mortgages, normally 20 or occasionally 25 years,
23 N.H.A. mortgages, 25 years or occasionally 30 years.

24 MR. SEDGWICK: I see. Coming back
25 to Mr. Fraser, as to policy loans, Mr. Fraser, I see
26 from this Canadian Life Insurance Facts that the
27 average ratio across Canada is 5.4% of reserves and
28 I see that your own company's is 6.4. Is there
29 any significance in the fact that your company's ratio
30 is about one point higher than the average?

1 MR. FRASER: I don't think there is
2 any real significance.

3 MR. SEDGWICK: I assume it does vary
4 from company to company, does it?

5 MR. FRASER: Yes, it does.

6 MR. SEDGWICK: A point or a point and
7 a half range?

8 MR. FRASER: That wouldn't be
9 unreasonable.

10 MR. SEDGWICK: I think those are
11 the only questions I want to ask.

12 THE CHAIRMAN: Mr. Irwin?

13 MR. IRWIN: Mr. Chairman and Mr.
14 Fraser, forgive me if I just want to cover about the
15 same ground as I covered in regard to London Life.
16 First in regard to policy loans, in your case, as
17 in the case of London Life, and generally the companies
18 in the Association, that the percentage that policy
19 loans represent to the total of policy reserves is
20 fairly low --

21 MR. FRASER: Yes.

22 MR. IRWIN: And the rate of interest
23 charged is fairly low. What would be your view as an
24 actuary if people suddenly became aware of this vast
25 abundance of credit which they have readily available
26 to them if there is trouble. If the demand for
27 policy loans increased to 60% of reserves, would you
28 consider that some action might have to be taken to
29 discourage further borrowing on policies?

30 MR. FRASER: Well, I don't think that

1 is likely to happen. I think that people are
2 reluctant to borrow on their insurance. They are
3 carrying the assets they have created for their
4 beneficiaries and for other purposes. I think those
5 of us who were in the business in 1929 saw a pretty
6 heavy run on policy loans. I don't think it ever
7 reached the figure that you mentioned.

8 MR. IRWIN: Consider it adverse --
9 if by their own nature the policy holders started
10 pushing the thing upwards --

11 MR. FRASER: I think that there was
12 mention in the London Life brief that policy loans
13 do have a slightly adverse effect on the operations
14 of the company and if they reached the proportion of
15 60% that you mentioned it would probably be serious.

16 MR. IRWIN: In other words you
17 might feel that you would have to discourage them in
18 some way to prevent a further extension of that.

19 MR. FRASER: I don't think it will
20 ever happen.

21 MR. IRWIN: You think the reason it
22 doesn't happen is that people have a psychological
23 attitude towards borrowing on their policies because
24 they don't want to --

25 MR. FRASER: I think that's the case,
26 yes.

27 MR. IRWIN: In regard to mortgages,
28 perhaps Mr. Carnegie might want to comment. Yesterday,
29 in regard to the London Life, it was brought out the
30 cost of servicing and acquiring a mortgage loan was

1 borne by the company and not recovered from the
2 borrower. But in the case of legal expenses and,
3 I believe, inspection fees, they were recovered from
4 the borrower and the matter which I am interested in,
5 is there any reason why all the costs should not be
6 borne by the company and the rate increased
7 accordingly so the borrower deals only with one
8 percentage rate which covers the entire cost of the
9 loan.

10 MR. CARNAGIE: Well, Mr. Irwin,
11 our feeling is that the out-of-pocket costs, which
12 is the type these legal costs are, could be
13 expressed as an interest rate. I think you use the
14 term "effective annual rate" -- if that means what
15 I think it means, this could be expressed. I would
16 be unhappy at the moment, without further study, if
17 it was proposed that we should actually collect these
18 costs over the term of the mortgage for two reasons.
19 One is that we would be losing interest if we simply
20 divided up the legal costs in some manner so that they
21 represented a given percentage of the amount out-
22 standing every year. We would be losing interest on
23 that. We would be calling these costs interest when
24 in fact they are costs that we make at the time. This
25 doesn't sound like very much. On a \$10,000.00 loan
26 the cost might be perhaps a little under \$200.00, but
27 if you multiply all our loans and add up the total
28 it might be several thousand dollars in a given year
29 added to the amount that we would then give a spread
30 in collection over many years. This, I think, would be

1 undesirable and probably would eventually have to
2 be reflected in higher rates.

3 MR. IRWIN: Yes, I realize that.

4 MR. CARNAGIE: The other point is,
5 of course, that very many mortgages are paid off
6 well before maturity. The mortgage loan which actually
7 runs to maturity is a fairly rare thing. An element
8 of cost which we have actually paid out -- because
9 we would, the lawyers have to be paid, we would have
10 to pay them and then recover from the borrow over a
11 period. If the loan is paid off in, say, seven or
12 eight years, I think some complicated mechanism would
13 have to be devised by which we could recover these
14 costs. I think we would have no objection whatever
15 to expressing these costs in terms of an increment
16 to the rate. And this, I think, could probably be
17 quite easily done.

18 MR. IRWIN: You wouldn't find any
19 mathematical problem in making --

20 MR. CARNAGIE: I don't think it's
21 a mathematical problem. I think it might possible
22 be more account-time-consuming to arrive at this
23 figure. I don't know yet. One difficulty does
24 arise that the legal costs or the actual fees are
25 based on tariff and can be calculated. There are
26 certain out-of-pocket expenses which the lawyers
27 pay. Now these, at the time we commit on a mortgage
28 loan and say what the rate is going to be, are unknown.
29 The percent would be very fractional, but nevertheless
30 we couldn't be exact. If we are making a statement

1 which has got to stand up, we would be a little
2 unhappy, I think, about making a statement which we
3 knew was not exact. We could possibly state, with
4 some confidence, that the effective rate would not
5 be in excess of something or other, but we couldn't
6 be quite exact unless we were prepared to absorb
7 certain out-of-pocket expenses ourselves, and
8 frankly we don't quite see why we should.

9 MR. IRWIN: We know, let's say
10 mathematical error or misrepresentation by making a
11 company --

12 MR. CARNAGIE: Well I would hope
13 that we would not make misrepresentations based on
14 miscalculations.

15 MR. IRWIN: Is there a technical
16 reason why it could not be stated as a rate of interest?

17 MR. CARNAGIE: None that I can see.
18 This is something we have not tried or fully explored
19 even. But I can see no reason why our mathematical
20 calculation shouldn't be perfectly exact.

21 MR. IRWIN: Thank you very much,
22 Mr. Carnagie.

23 THE CHAIRMAN: Mr. Whicher?

24 MR. WHICHER: I was going to ask --
25 on a policy under \$1,500.00, let's say, do you figure
26 cash value. Do you pay interest on that or money to
27 the policyholder?

28 MR. FRASER: Monies are brought
29 forward and interest rates --

30 MR. WHICHER: Yes, but I mean is there

1 an interest rate paid on that money?

2 MR. FRASER (Inaudible)

3 MR. WHICHER: If a fellow had a
4 \$2,000.00 cash value on his policy and he borrowed
5 \$1,000.00, would that effect the dividend rate of
6 the policy the next year?

7 MR. FRASER: (First part inaudible)
8 He's not paying anything extra other than 6% if he
9 borrows \$1,000.00. His dividends will increase each
10 year on the policy.

11 THE CHAIRMAN: Mr. Bukator?

12 MR. BUKATOR: No, I don't have any
13 questions.

14 THE CHAIRMAN: Mr. Lawrence?

15 MR. LAWRENCE: Nope.

16 THE CHAIRMAN: Mr. Oliver? Mr. White?
17 Mr. MacDonald?

18 MR. MACDONALD: What is the spread
19 between your yield on policy loans and your general
20 average yield?

21 MR. FRASER: As far as I can determine
22 it is about 6.1%. It's very high.

23 MR. MACDONALD: Much higher than
24 the others?

25 MR. FRASER: Yes.

26 THE CHAIRMAN: Mr. Kerr?

27 MR. KERR: Do you have any idea of
28 the approximate percentage of policy loans that are
29 repaid eventually?

30 MR. FRASER: You mean by cash?

1 MR. KERR: Well no, what are the
2 terms or conditions that the company may have. I
3 notice you have a reference here that you encourage
4 policyholders to repay their loans and you have
5 partial payment provisions.

6 MR. FRASER: Well, a lot of policy
7 loans terminate because the policy terminates, or
8 is surrendered. And the policy loans which are
9 repaid, it's sort of a well known clause they are
10 liable to borrow again. I haven't any hard figures.

11 MR. KERR: As long as there is some
12 premium credit with regard to the debt of the
13 policyholder, will the policy -- the policy will be
14 paid less than the amount of the loan, is that it?

15 MR. FRASER: Yes, as long as there
16 is some equity left.

17 MR. KERR: Is there any provision or
18 programme by your company or salesforce in the event
19 that a policyholder with your company, for example,
20 has borrowed the maximum amount on his policy whereby
21 you attempt to explain the danger, shall we say,
22 of having a proper insurance plan?

23 MR. FRASER: Well we do that
24 constantly. We point out that the policy is in
25 danger of running out. We use as much pressure as
26 we can to reduce his amount --

27 MR. KERR: You have the business
28 of protection as well as providing emergency loans?

29 MR. FRASER: Oh, yes.

30 THE CHAIRMAN: Mr. Reilly, do you have

1 any questions?

2 That's all then, gentlemen. Thanks
3 very much, Mr. Fraser, for being with us this
4 morning. We appreciate your coming.

5 We will now call on Mr. J. H. Wain-
6 wright of the Canada Life Insurance Company.

7 Mr. Wainwright, you don't have a
8 brief?

9 MR. WAINWRIGHT: Not a brief, no.
10 We are prepared to answer any questions.

11 THE CHAIRMAN: Do you wish to make
12 a statement to the Committee?

13 MR. WAINWRIGHT: A few preliminary
14 remarks.

15 THE CHAIRMAN: All right, fine.

16 MR. WAINWRIGHT: General interest
17 facts. Canada Life has had policy loan clauses in
18 its policies since 1890. The interest rate generally
19 from then until August 1914 was $5\frac{1}{2}\%$ and since
20 August, 1914 has been 6%. Our policies have always
21 provided that the interest accrues on a day to day
22 basis. There are no other charges except for a
23 while on automatic premium loans there was an extra
24 charge of 1% for the cost of handling. That extra
25 charge, although still existing in old policies,
26 was discontinued in 1935 so that on both cash and
27 premium loans the interest rate is 6% per annum on
28 a day to day basis.

29 I notice that in Canada our policy
30 loans in relation to policy reserves was 4.71% in 1954

1 and at the end of 1963 were 3.7%. I have no
2 explanation for that decrease except the general
3 observation that I think policy holders were charged
4 policy loan provisions as a benefit under their
5 policies being used only if a need for that benefit
6 arises in the nature of an emergency. I don't think
7 they regard it as an ordinary borrowing medium.

8 Those are my own view and
9 observations after being in the business for a great
10 many years.

11 The 6% gross rate on policy loans
12 nets us, at present, 5.06% after deducting policy
13 loan expenses. Our net rate earned on our assets
14 last year was 5.44%. Does that answer questions?

15 THE CHAIRMAN: Of course there
16 must be a lot of policyholders who are using their
17 policies for the purpose of borrowing from the bank
18 or elsewhere?

19 MR. WAINWRIGHT: We run about 1,500
20 policies a year assigned to banks in Canada for
21 lending purposes. That, to my mind, is not a
22 very large number.

23 THE CHAIRMAN: Surprisingly small.

24 MR. WAINWRIGHT: I'm sorry I can't
25 tell you how many policy loans by policyholders
26 we have in total. And a great many of those loans
27 at banks are paid off and a fair number of releases.
28 So that borrowing does go on. I think in that case
29 why they are using their policy as collateral and
30 going to an ordinary lending institution. Insurance

1 companies, except for their mortgage activities, are
2 not lending institutions. They are service
3 institutions and protection institutions.

4 THE CHAIRMAN: How does your company
5 rate volumewise in Canada?

6 MR. WAINWRIGHT: I think we are
7 maybe fourth. Now these are just recollections. I
8 think there are three companies, on business in force.
9 On assets I think we may be third or second.

10 THE CHAIRMAN: And what about in
11 volume of mortgage business?

12 MR. WAINWRIGHT: I couldn't answer
13 that. The mortgage officers are here and they will
14 be glad to.

15 THE CHAIRMAN: Mr. Sedgwick?

16 MR. SEDGWICK: I was only interested
17 in one thing. You said your ratio of reserves to
18 policy loans is 3.7?

19 MR. WAINWRIGHT: That's correct, sir.

20 MR. SEDGWICK: Apparently in 1952
21 the Canadian average was 5.4 and the Excelsior Life
22 was 6.4. Do you know of any reason why yours is
23 lower?

24 MR. WAINWRIGHT: No, I have no
25 explanation. There is one observation I would make,
26 first I would like to be sure that the ratios are
27 worked on the same basis. Some of the ratios I
28 listened to, yesterday and today, were percentage
29 of loans to total assets.

30 MR. SEDGWICK: No, the statement in

1 the little booklet --

2 MR. WAINWRIGHT: That's loans to
3 policy reserves, yes, okay. Then they are on the
4 same basis then. No, I have no explanation.

5 MR. SEDGWICK: It is significantly
6 lower.

7 MR. WAINWRIGHT: Yes.

8 MR. SEDGWICK: 3.7 instead of
9 the national average of 5.4.

10 THE CHAIRMAN: Mr. Irwin, do you
11 have any questions?

12 MR. IRWIN: Well, just the same old
13 question. Mr. Wainwright, have you any comment
14 on the possible idea of including all charges,
15 including legal charges, in a stated rate?

16 MR. WAINWRIGHT: On mortgages?

17 MR. IRWIN: Yes.

18 MR. WAINWRIGHT: No. I don't
19 think I'm in a position to comment on the mortgage
20 business.

21 MR. KENNY: Mr. Chairman, I wonder
22 if I might make just one comment on the question
23 of the variations in the percentage of policy loans
24 to reserves. In my estimation it can be possibly
25 accounted for by virtue of a different market. For
26 instance, Canada Life, say, has an average size
27 policy which is considerably larger than the average
28 size policy of Excelsior Life. The probable reason
29 for that is that Excelsior Life may have a larger
30 amount of its savings in perhaps slightly lower

1 economic stratum than the Canada Life might have.
2 I know through the years we have sold insurance,
3 a large percentage of it might be what you would
4 term today as the blue collar market, rural market,
5 but perhaps a smaller percentage of our business
6 is in the higher level market, large business
7 insurance cases, very large insurance policies; and
8 I would think there is a demand in our market for
9 policy loans on an emergency basis might tend to be
10 greater. For instance, the large policy holder would
11 have a tendency to use his policy as collateral at
12 a bank. Our policyholder, in all probability,
13 would come directly to his agent or to the branch
14 in his local city in order to get emergency money.
15 Now that is only a theory, but it seems to me that
16 it does hold some water.

17 THE CHAIRMAN: Thank you. Mr.
18 Whicher, do you have any questions?

19 MR. WHICHER: No, thank you.

20 THE CHAIRMAN: Mr. Bukator? Mr.
21 Lawrence? Mr. Oliver? Mr. Letherby? Mr. MacDonald?
22 Mr. Kerr? Mr. Rowe? How about you, Mr. Reilly?

23 MR. MACDONALD: Mr. Chairman, in the
24 original Association brief one of the groups had
25 several representations to make in addition to
26 mortgage brokers briefs --(rest of statement inaudible)

27 THE CHAIRMAN: Mr. Tuck, would you
28 mind coming up to the mike?

29 MR. TUCK: Mr. MacDonald, the
30 reference in our brief was to the fact that we

1 anticipated the London Life would wish in its brief
2 to deal with mortgage interest. I'm not sure how
3 we phrased it in the brief, but that, I think, is
4 the passage you refer to.

5 THE CHAIRMAN: Are there some
6 further questions you wanted to ask about mortgages?

7 MR. MACDONALD: (Inaudible)

8 THE CHAIRMAN: Well thanks very
9 much for being with us this morning, Mr. Wainwright.
10 Is there someone here, Mr. Tuck, from the Empire
11 Life Insurance Company?

12 MR. McINNIS: Mr. Chairman, we have
13 no formal brief. The brief submitted by the Life
14 Officers covers our policy loans procedures perfectly
15 all right.

16 THE CHAIRMAN: Would you care to
17 make a preliminary statement or just proceed with
18 questions that the members might have?

19 MR. McINNIS: Well, our policy loans
20 at the present are 6.6% of our assets, which would
21 be a little over 7%, working on a reserve basis. Now
22 the net rate earned on policy loans was possibly 5.18%
23 and our net rate on all our assets was 5.68%, about
24 1.5% difference in there. Now, I don't think I have
25 anything further to add.

26 MR. SEDGWICK: You were here when
27 the others gave their evidence, I take it?

28 MR. McINNES: Yes, sir.

29 MR. SEDGWICK: Would you agree with
30 the answers they gave in connection with policy loans?

1 MR. McINNES: Yes, I do.

2 MR. SEDGWICK: I see your ratio
3 is a little bit higher than Excelsior -- 6.6 --
4 I don't suppose that has any significance, does it?

5 MR. McINNES: None at all, no,
6 that we can ascertain.

7 MR. SEDGWICK: I have no questions.

8 THE CHAIRMAN: Mr. Irwin, do you
9 have any questions?

10 MR. IRWIN: Just the same one. Would
11 you agree with the view of the others that you
12 could possibly express all charges as a stated
13 rate?

14 MR. McINNES: It would be possible,
15 yes.

16 THE CHAIRMAN: Mr. Whicher, any
17 questions?

18 MR. REILLY: Before you leave that
19 point, Mr. Chairman, I know Mr. Irwin is rather
20 anxious to get an expression of opinions. Do you
21 think it is desirable to do that, to include
22 those charges as part of interest?

23 MR. McINNES: I would personally
24 rather not. First of all the legal fees and
25 evaluation is strictly a one time pay.

26 MR. REILLY: It's part of the cost
27 of obtaining money?

28 MR. McINNES: Personally, no.

29 THE CHAIRMAN: Mr. Whicher? Mr.
30 Bukator? Mr. Lawrence? Mr. Letherby? Mr. MacDonald?

1 Mr. Ross?

2 What is your name again?

3 MR. McINNES: Mr. McInnes.

4 THE CHAIRMAN: Well, thank you very
5 much, Mr. McInnes for being with us this morning.
6 We appreciate your coming.

7 Well, gentlemen, that terminates
8 the briefs that we have this morning. We will have
9 a ten minute recess and I will ask the members to
10 reconvene here.
